BROSKI / WEST DELHI / 6 OCTOBER 2026

Council review + NCR sourcing

Keep the design. Strengthen the foundations.

Restored Broski website review, regional supplier contacts, white-label screening questions and an execution checklist. Prepared for the West Delhi founder. Existing total launch budget: ₹2,00,000.

Finding	Decision
Website	Build and backend tests passed; browser/device acceptance remains unverified. Keep the restored appearance.
Recommended work	Loading recovery, decorative-motion control, lighter images, readable mobile text and reliable repeat-action feedback. No design changes made.
Sourcing	Seven primary-site regional candidates, with separate secondary discoveries. No candidate has been approved for the exact 500-pack biscuit requirement.
Next move	Four screening calls, then comparable written quotes and qualified product/pack/label review. No deposit on public website claims alone.

Use the contact sheet to screen firms, the detailed directory to understand gaps, and the council checklist to scope future website work. Published phone numbers are not call-verified. The council is task-based peer review, not autonomous background monitoring.

Quick supplier contact sheet

Candidate / area	Published number	What to confirm
Pet Zone India Bakarwala, West Delhi	08047689883	Biscuit listing; factory/OEM unconfirmed Official source
Mannu-G / Mannuji Meerut	+91 9958228588	Biscuit OEM advertised; enhanced diligence Official source
Petz Creation Kundli, Sonipat	+91 9999971719	Biscuit brand; factory/OEM unconfirmed Official source
Innomalous Sector 63, Noida	+91 9711603003	Pet private label; baked biscuit unconfirmed Official source
TrueCare Foods Kasna, Greater Noida	+91 8799794887 / +91 8799793284	Contract pet treats; biscuit line unconfirmed Official source
Biovencer Greater Noida / NSEZ	+91 9560418220	Pet-food OEM; biscuit line unconfirmed Official source
Al Moin Exports Hapur	+91 7505294317	Adjacent chews; domestic supply unresolved Official source

Pet Zone’s number is a marketplace-site call line, not a verified direct mobile or WhatsApp contact. Mannu-G expressly lists WhatsApp Business; Al Moin links its WhatsApp. Other WhatsApp status is unconfirmed. Contact pages can change; verify the entity and current staff before payment.

Priority call: “Do you manufacture baked dog biscuits yourself, and can you factory-pack 500 accepted 200 g packs under Broski using a documented existing recipe?” Reject or reclassify format mismatches before comparing prices.

Council decisions and release gates

6 October 2026. Operating base: West Delhi. Scope: review the restored site and research sourcing; no redesign or live-commerce deployment was requested or performed in this pass.

Council conclusion

Preserve the restored visual design. Prioritize reliability, useful feedback and mobile readability before adding more animation. The source review found no established P0 defect in the local demo; this is not a declaration that every browser, device or assistive technology passes.

The design and technical specialists exchanged findings. ATLAS integrates the result; sourcing is a separate specialist lane. The local council skill is a broken pointer, so this is direct peer discussion rather than a loaded council workflow. Roles operate during this task, not as permanent background processes.

Ranked changes to propose

Priority	Change	Why / acceptance evidence
P1	Bound product loading with timeout, retry and stale-request handling	A never-settling fetch currently leaves the skeleton indefinitely. Test stalled, offline, retry and late old response.
P1	Stop the floating decorative card after an entrance, or extend a clear motion toggle	The 3D pause does not cover its separate infinite CSS float. Verify reduced motion and the visible pause state without moving the artwork.
P1 performance	Optimize large image delivery and measure mobile load	Four PNGs total about 8.9 MB according to technical inspection. Generate suitable responsive formats/sizes, preserve originals and measure before claiming speed improvements.
P2	Refresh feedback on repeated Add actions	Identical toast text does not restart the dismissal timer or guarantee a fresh announcement. Use an event ID/product-specific status and test rapid repeated adds.
P2	Raise essential mobile text carefully	Some product metadata and controls use 8–11px text. Target readable sizes and verify wraps at 320/360/390/768px and 200% text zoom; retain the preferred collection layout.
P2	Bound newsletter requests and prevent duplicate pending submissions	Current preview can remain at Checking indefinitely. No real subscription currently occurs.
P2 resilience	Normalize stored cart and reconcile startup documentation	Deduplicate IDs/cap total quantities after hydration; align README with the launch helper's actual rebuild behavior.

Do not reapply advanced.css, turn the collection into a different layout, add more automatic movement, remove existing sections or change products/prices merely because a reviewer prefers it. Optional play-section shortening is a hypothesis to test with shoppers, not a mandated redesign.

Verification performed and outstanding

Production build and the existing backend test suite passed in the technical review. Homepage, product API and generated product asset returned HTTP 200 after ATLAS restarted the local server at http://127.0.0.1:4174/. Backend tests use isolated test data; successful tests do not certify production security.

Browser/local-page automation had an existing access restriction; no alternate browser/Playwright workaround was used. Rendered mobile layout, actual keyboard/touch interactions, screen-reader announcements, measured contrast over photos and real-device performance remain unverified. Source checks are useful evidence but cannot replace those tests.

Practical test matrix for the next permitted browser session

Area	Actions and expected outcome
Navigation	Menu at narrow widths; Escape closes; shop/story/FAQ links land visibly without the dock hiding essential controls.
Catalog	All filters, search, sorting, no-results state, stalled API and retry; counts and visible products agree.
Product	Open/close details, repeat Add, quantity limit; keyboard focus remains visible and returns appropriately.
Bag	Change quantity, remove the focused row, empty bag, coupon valid/invalid, shipping threshold; API total agrees.
Demo order	Invalid fields, success, timeout, double submit, server failure, retained cart; no real money or dispatch claim.
Accessibility	Tab/Shift+Tab, Escape, inert background, focus restoration, FAQ summaries, live statuses, text zoom, touch target testing.
Motion	Pause, keyboard 3D controls, reduced motion on/off, touch scrolling, offscreen/document-hidden behavior and load fallback.
Recovery	Reload cart, corrupt/legacy local storage, failed lazy scene chunk, unavailable image and offline API.
Responsive	320, 360, 390, 768 and 1440px; portrait/landscape; inspect overflow, long product names and modal scrolling.

Before commercial release

Actual released product, ingredients, pricing, pack details and supported feeding/storage guidance; actual seller/contact/policies and serviceable PINs; secure payment confirmation and order storage; shipping/refund reconciliation; real photographs and genuine consented customer feedback. Sample reviews and generated packaging remain concepts. The demo's intentional non-retention of fulfilment contacts prevents dispatching real orders.

Ownership and subsequent changes

ATLAS coordinates the accepted scope, integrates evidence and records decisions. Frontend specialist implements accepted reliability changes; design/accessibility reviewer checks the same restored appearance and mobile flows; technical reviewer checks tests, errors and lifecycle behavior. Sourcing specialist checks each written supplier quote against product, label, safety and cash requirements.

Run this checklist after meaningful changes. This saved governance record does not create autonomous monitoring, recurring reviews or a live deployment. No supplier contacted, sample purchased or ad launched during the review.

Detailed manufacturer discovery and RFQ

Checked 6 October 2026. Operating base: West Delhi. Research only; nobody contacted, no samples ordered, no factory audited. This is a discoverable shortlist, not “all manufacturers in NCR.” Business-strategist workflow: separate product evidence from assumptions, then use staged commercial gates. Public capability claims do not establish QA compliance or availability for Broski.

Recommendation

Screen **Pet Zone India** first for proximity and an explicit biscuit listing, but establish whether it actually bakes those biscuits. In parallel, ask **Innomalous**, **TrueCare** and **Biovencer** whether they have an existing baked-biscuit line: these have stronger pet-food private-label/contract evidence, but their reviewed pages do not confirm the precise biscuit format. **Mannu-G, Meerut** explicitly advertises dog-biscuit OEM; its website/document inconsistencies require enhanced diligence before money changes hands. **Petz Creation, Kundli** is a brand/supply-chain identification lead, not an established OEM in this research.

No nearby vendor is yet verified as a suitable factory able to deliver 500 accepted, validated, branded 200 g biscuit packs. National B&K remains a useful direct-biscuit-OEM comparison from the earlier directory; local geography must not outrank evidence. No travel times or local freight savings have been assumed.

A. Biscuit-specific leads with important gaps

1. Pet Zone India — Bakarwala/Mundka, West Delhi

Evidence: supplier-operated, IndiaMART-managed site explicitly lists bone-shaped dog biscuits in 1,000 g packets. Its company profile describes manufacturing, trading, importing and retailing, with particular expertise in bowls/accessories; that does not establish an in-house biscuit oven/food plant. Private-label biscuit service not confirmed.

Public contact: 08047689883 (international format +91 8047689883), a listed marketplace-site call number; direct factory ownership/routing not verified. Do not call it a confirmed direct mobile or WhatsApp number. Named contact: Kashyap Anand. Email address not exposed; official site enquiry form available.

Contact address: G/F, KH No. 18/1/2, near Hirankudna Road, Pole No. Mdkp281, Bakarwala, New Delhi 110041. Profile separately lists registered address House 7-A, Khasra 14/10/11, Kamruddin Nagar, Delhi 110041. Confirm biscuit plant versus office before visiting.

Listed price/MOQ: ₹58/kg, 25 kg MOQ, 1 kg packet. This is indicative catalogue pricing, not a quote for Broski, not proof of recipe quality and not ₹11.60 per finished 200 g retail pack. Tax, freight, QA, filling, sealing, labels and packaging unknown.

Sources checked 6 Oct: biscuit listing, company profile and call number.

2. Mannu-G / Mannuji — Meerut, Uttar Pradesh

Evidence: search-indexed official milk-flavour puppy dog-biscuit page advertises OEM under the buyer's brand. This is the strongest explicit nearby biscuit-plus-OEM wording found, but site reliability is a material qualification: direct retrieval has failed/returned technical errors, while export pages display placeholder-looking licence/GST identifiers and differing generic MOQ terms. These are verification concerns, not an allegation of misconduct.

Public contact: +91 9958228588, explicitly phone and WhatsApp Business; info@mannuji.in. Published Meerut factory address from company careers page: Khasra 520, Village Acchronda, Gagole Road, Partapur, Meerut 250103. Reconfirm actual biscuit production/selling entity.

MOQ/price: export FAQ says biscuits/cookies 50 cartons, but dog-biscuit carton weight, India domestic MOQ, 200 g packing and price unknown. Do not apply PET-jar MOQ or general export timing to Broski.

Sources checked 6 Oct via official indexed pages: biscuit OEM product, contact, export page with identifier concerns. Factory-address source previously reviewed 1 Oct: company careers page; not freshly independently confirmed.

3. Petz Creation — Kundli, Sonipat, Haryana

Evidence: official about page identifies a pet-care brand and depicts its biscuits. That establishes a brand/contact lead, not an audited biscuit factory or willingness to white-label. Ask whether it manufactures internally, who is shown as manufacturer on its biscuit label, and whether private label is offered.

Public contact: +91 9999971719; info@petzcreation.com. No WhatsApp status verified. Published address: First Floor, Khasra No. 47, 16/1 to 16/4, 25/1 Min, Area Kundli, Sonipat 131028, Haryana.

MOQ/price/OEM: unknown. Direct retrieval failed in this run; the official search-indexed page provided contact evidence. Source checked 6 Oct: official about/contact.

B. Actual pet-manufacturing/private-label evidence; biscuit capability must be screened

4. Innomalous Technologies — Sector 63, Noida

Evidence: official business site offers private-label pet edibles and manufacturing, including dehydrated treats and custom products. Reviewed pages do not establish an existing baked biscuit SKU. Related Pawcrafted brand's official page identifies its Noida production facility and the same company; count as one manufacturing group, not two independent factories.

Public contact: Innomalous +91 9711603003; its quote form is the safest B2B route. Related brand's explicit business/bulk channel: sales@pawcrafted.com, +91 9581993320. Do not presume both lines have the same staff. WhatsApp not confirmed here.

Address: E-197, Sector 63, Noida, Uttar Pradesh 201309.

MOQ/price: “low MOQ” wording without numerical biscuit commitment; unquoted. Product subpages timed out, so no biscuit inference from an inaccessible catalogue.

Sources checked 6 Oct: manufacturer/private-label homepage, related brand production facility and business contacts.

5. TrueCare Foods — Kasna, Greater Noida

Evidence: official iCARE4PETS page offers contract manufacturing under the buyer's brand. Treats page lists soft sticks, meat strips, soft bites and dental sticks with customization. These are adjacent formats; do not silently substitute them for baked biscuits or copy the company's functional claims onto Broski.

Public phones: +91 8799794887; +91 8799793284. **Emails:** armaan.goyal@truecarefoods.in; deepak.sharma@truecarefoods.in. WhatsApp not confirmed.

Address: K-329, Site-V, UPSIDC Industrial Area, Kasna, Greater Noida 201310, Uttar Pradesh.

MOQ/price: unknown. Ask about an existing crisp baked reward-biscuit line and documentation before discussing customization or premixes.

Sources checked 6 Oct: contract-manufacturing offer/contact, actual treat formats, homepage.

6. Biovencer Healthcare — Greater Noida / NSEZ

Evidence: official pet-food page explicitly offers OEM/private-label dog/cat food and customized packaging. Exact biscuit process/SKU is unconfirmed. Its separately advertised “protein diskettes” are positioned for humans and must not be used as evidence of dog-biscuit capability.

Public contact: +91 9560418220; info@biovencer.com. WhatsApp not confirmed.

Published units include: K-230 and K-232, Site-V, UPSIDC Industrial Area, Greater Noida 201306; G-14 and K-436, Site-V, Kasna, Greater Noida 201308; plots 181 and 114, NSEZ. Ask which unit actually produces the quoted pet food, and whether the proposed supplying entity/unit can serve this domestic order.

MOQ/price: unknown. Do not assume its broad manufacturing portfolio proves a suitable 100 kg biscuit run.

Sources checked 6 Oct: pet-food OEM/contact, human-diskette distinction.

C. Adjacent fallback, not a biscuit solution

7. Al Moin Exports — Hapur

Official site offers private-label dehydrated chews/meat treats. Published plant: Industrial Area Phase 2, Hapur, Uttar Pradesh 245101. Public WhatsApp-linked number +91 7505294317; exports@almoinexports.com. Site identifies a US corporate entity and describes an export-oriented operation; domestic eligibility, Indian invoice entity, 500-pack minimum and costs remain unconfirmed. Not a verified biscuit line. A chew product would need a separate safety, serving-size and economic decision.

Sources checked 6 Oct: contact and plant, OEM service. Export-oriented footer was directly observed in prior research; current search-indexed contact result reconfirms export focus, not domestic permission.

D. Discovery register: insufficient primary evidence, do not present as verified factories

Name/area	What surfaced	What prevents approval / next step
Gopal Krishna Enterprises / Spunky Pets, Faridabad	JioMart retail product declaration names it as dog-biscuit manufacturer; H.No. 1929, Sector 23A, Faridabad 121005; listed manufacturer contact 9311989810 and gopalkrishnaenterprises2@gmail.com	Retailer-hosted declaration, not independently established company manufacturing/OEM source. Ask for manufacturing-site identity, pack label and OEM terms. Phone is a published manufacturer field, not WhatsApp. Retail listing.
Amandev Biscuits, Mukundpur, Delhi	Third-party dog-biscuit listing; old Delhi government record confirms a historical entity/address	No current primary OEM/contact evidence. Government record's licence dates end 2021; cannot establish current authorization or dog-food suitability. Do not reproduce an unverified phone from contact-data aggregators. Historical official record.
Lal Pet Products, Gurugram	Retail pages attribute dog biscuits to this name	Actual food factory and OEM unresolved; multiple address/product-category references. Do not equate marketer/accessory manufacturer with biscuit production. Retail product attribution.
Medilogy Biotech, Ambala (wider regional backup)	Supplier-operated marketplace site claims veterinary-product manufacturing; directories list dog biscuits	Current primary biscuit/OEM offer not established. Published marketplace call number +91 7942539118, 24 Industrial Area, Ambala 133001; not confirmed direct or WhatsApp. Supplier site. Older supplier brochures do not prove today's scope.
Oye Inc / Dux, Rohtak; Immuno Life, Ambala; KLC Global	Directory results show biscuit listings	Not promoted to primary shortlist without own-site factory, contact and biscuit-contract evidence. No directory MOQ treated as a quote.
CRS Art Collection, Faridabad; various Gurugram suppliers	Directory category pages label sellers/manufacturers	Category placement is insufficient to establish a food factory; no substantiated biscuit OEM evidence obtained.

All discovery-register pages checked 6 Oct; third-party sources are explicitly secondary leads. They do not outrank the primary-source shortlist.

What the geographical search did—and did not—establish

Searched Delhi/West Delhi, Noida, Greater Noida, Ghaziabad/Modinagar, Gurugram, Faridabad, Meerut, Hapur, Kundli/Sonipat, Panipat, Rohtak and wider Haryana/Ambala. No primary-source-confirmed dog-biscuit OEM was established in Panipat or Ghaziabad/Modinagar in this pass. This is a research limitation, not proof none exists.

Exclude **Krown/GRKC and ordinary human bakeries** from the pet-factory list unless they separately substantiate a pet line. Exclude **Dr. Expert Formulation** city landing pages: their stated pet scope is grooming/hygiene, not food. **Pawnourish** is explicitly distribution; **Sai International/First Bark** describes distributing an international treat brand. Retail stores, marketing offices and city SEO pages are not evidence that biscuits are manufactured there.

Broski call and RFQ: same brief for every candidate

Opening: “We are a West Delhi startup evaluating one existing, documented dog reward-biscuit recipe under Broski. Please confirm whether you manufacture biscuits yourself and can deliver 500 accepted sealed 200 g retail packs to [West Delhi PIN]. This is an enquiry, not an order.”

1. **Factory identity:** Who owns the oven/line? Exact food-plant address, legal selling entity, invoice/GST details and bank beneficiary? Can we visit by appointment or obtain a live site walkthrough and manufacturing documents? If a trader, identify actual manufacturer rather than concealing it.

2. **Actual product fit:** Existing baked recipe, intended use/age range, formulation revision, ingredient/allergen list, specialist oversight? What changes to flavour, size or pack invalidate existing validation? Do not commission a new recipe merely to match a website mock-up.

3. **Quantity:** Minimum by recipe and packaging artwork? Quote 500 accepted packs, not 100 kg of bulk. Nominal retail fill is 100 kg; yield loss, overfill, lab samples and retained stock require an agreed additional allowance. If smaller documented pilot is possible, quote it separately.

4. **QA evidence:** Request traceability, ingredient controls, documented process, lot COA and relevant lab reports. Qualified pet-food technologist/veterinary nutrition reviewer and laboratory must set appropriate safety/chemical/microbiological criteria. No recipe or universal numerical test limits are supplied here.

5. **Shelf life:** Evidence for the exact recipe and final packaging/storage conditions? Ask which existing data transfers, what additional work is needed and who signs release. A competitor's best-before date or generic “12 months” promise is insufficient.

6. **Packaging:** Stock opaque/metallized barrier pouch with zipper plus top heat seal, actual 200 g fill test, two labels and coding at the food plant. Ask layer structure, contact/migration evidence, moisture/oxygen barrier values with test conditions, sealing settings and integrity checks. A pouch marketed as “200 g” may not fit bulky biscuits.

7. **Price:** Itemize product, pouch, labels, packing/sealing/coding, master cartons, inward delivery, tax, one-time development/testing and wastage. Who owns spare packaging? Quote validity and accepted-pack costing. No home repacking assumption.

8. **Terms:** Samples first; agreed specification and final artwork; deposit only after identity and evidence review; production milestones, inspection/hold, rejected-batch remedy, replacement freight, recall cooperation, formulation/IP rights and no substitutions without approval. Contract/legal review remains required.

Copyable email/message:

Subject: Broski West Delhi pilot — biscuit manufacturing / 500 × 200 g accepted retail packs

Please confirm whether your own facility manufactures dog biscuits and offers domestic private label. We are evaluating one existing documented reward-biscuit SKU, sealed and labelled at your plant, delivered to [PIN]. Please provide legal entity/plant details, product-specific MOQ, sample fee, formulation and final-pack stability evidence available for expert review, batch testing/COA, proposed stock pouch specification, complete 500-pack landed quotation, one-time costs, lead times and payment/rejection terms. Please distinguish biscuit capability from adjacent treats. Our planning range is ₹75–95 per accepted landed pack, subject to safe compliant scope; it is not an agreed price. If unavailable, quote your smallest suitable pilot separately. No manufacture or artwork printing is authorized by this enquiry.

Budget and acceptance decision

The total business ceiling is ₹2,00,000, not the manufacturer spending allowance. Prior plan's 500 × ₹85 = ₹42,500 inventory cost is unquoted; ₹75–95 yields ₹37,500–47,500. Keep QA, consultant, label/legal review, samples, outbound shipping, acquisition and contingency separately visible. Recalculate with actual tax treatment and customer-order carton costs; never compare an untested bulk ₹/kg listing directly against finished branded retail-pack cost.

Founder can spend the first week on four screening calls (Pet Zone, Innomalous, TrueCare, Mannu-G) and two written follow-ups; substitute Biovencer if biscuit capability is rejected. Obtain comparable written offers before physical samples. No deposit based on this document alone. Hold or reject a candidate for missing identity/traceability, unsupported safety/stability, unexplained beneficiary mismatch or refusal of the agreed manufacturing specification. A high MOQ is simply a poor commercial fit. If no nearby supplier clears the gates within budget, obtain the national OEM comparison or reduce scope/delay; do not force a nearby unverified producer to satisfy an arbitrary launch date.

Appendix: technical review evidence

Decision

PASS for build and supplied local-demo API checks. NEEDS WORK for browser/device acceptance. NOT READY for live commerce. No implementation was changed during this review. Preserve the restored visual direction; the recommendations below are targeted reliability, accessibility and performance work.

Reviewed current main.jsx, Modal.jsx, motion.js, TreatScene.jsx, Experience.jsx, SceneBoundary.jsx, active CSS, server.mjs, server.test.mjs, package.json, README, HANDOFF and START-WEBSITE.cmd. Applied the previously loaded frontend-developer workflow, rediscovered through the skill index. The council workflow placeholder is broken; this review used actual peer discussion with the design reviewer instead.

Evidence

• npm test: PASS, one integrated Node test, zero failures. Assertions cover server-owned prices, coupon/shipping thresholds, invalid/duplicate items, quantity limits, customer validation, concurrent persistence, absence of customer details in stored records, demo newsletter responses, selected security headers, missing assets/routes and oversized request bodies. This is not UI coverage or a comprehensive penetration test.

• npm run build: PASS, Vite 7.3.6, 43 modules. Three chunk approximately 505.11 kB raw / 128.17 kB gzip triggers a size advisory; main approximately 384.64 kB raw / 129.60 kB gzip. A successful build does not establish runtime frame rate or layout quality.

• Browser/device interaction was not tested: local-page access was previously blocked by browser tooling. No alternate browser or Playwright workaround was attempted. No Lighthouse, contrast measurement, screen-reader certification or visual acceptance is claimed.

• Launch helper source check: resolves its own directory, checks Node/npm, installs if Vite is missing, always builds, aborts on failures, sets PORT=4174 and starts the localhost server. The batch helper itself was not executed because it would start a persistent interactive process.

Five priorities, in order

1. **Bound loading and submission waits.** src/main.jsx:21 fetches products without cancellation or timeout; a stalled request leaves loading skeletons indefinitely and never exposes retry. src/main.jsx:30 newsletter handling similarly lacks a timeout and in-flight guard. Add bounded waits, cleanup and explicit retry feedback; retain the existing appearance. Validate offline, stalled response, malformed data and recovery. Checkout already has a 20-second timeout and duplicate-click guard.

2. **Reduce transferred imagery, then measure real mobile behavior.** The four supplied PNGs total 8,909,050 bytes (about 8.5 MiB). Produce appropriately sized modern-format variants and responsive image selection while preserving originals and art direction. Lazy scene import still begins when its initial hero renders; consider deliberate mobile/visibility loading only after measurement. Validate image quality, network transfer, loading shifts and frame rate on an actual narrow-screen device. Chunk size alone is not evidence of poor frame rate.

3. **Give continuous decorative motion an explicit stop path.** src/redesign.css:2 runs the floating treat animation indefinitely. Reduced-motion CSS disables it, but the hero's pause button only controls the Three scene. Prefer a finite entrance/settle or a clearly scoped page-motion control; do not silently change a button labeled “Pause 3D motion” into an unrelated control. Keep interactive tossing and the preferred visual styling. Verify both OS reduced-motion and keyboard controls in browser.

4. **Verify mobile legibility and navigation without redesigning.** The design reviewer identified 8–11px metadata in mobile CSS. Increase essential reading text selectively while preserving the preferred product grid; confirm no clipping at 320px, 390px and 200% zoom, visible focus, cart/modal scroll and touch scrolling across the scene. Source

contains 44px minimum controls and touch-action: pan-y; neither establishes actual device acceptance. Moving/collapsing the playful section is optional product testing, not a required technical fix.

5. **Refresh repeated action feedback and correct launch documentation.** src/main.jsx:22–24 uses the same toast string for consecutive adds, so a later add does not restart its 3.5-second timer or reliably produce a new live announcement. Use an event counter or timer ref while keeping the existing toast. README.md:21 says the helper reuses a build, contradicting the actual always-build helper and README introduction. Correct this one sentence.

What appears sound by source

• Modal traps keyboard focus, supports Escape when unlocked, makes background siblings inert, observes changes, restores body scrolling and restores focus on cleanup. Pending checkout locks dismissal; selected errors retain the cart.

• Motion scopes GSAP context and trigger ownership, avoids global cleanup, honors reduced motion, and limits hover tilt to fine-pointer desktop. Pointer work is coalesced and listeners/frames are cleaned up.

• Three scene suspends offscreen and when the document is hidden; caps mobile DPR, offers keyboard rotation, preserves vertical touch scrolling, has observer fallbacks and disposes resources. Error boundary/static fallback protects access to the shop if the decorative scene fails.

• Experience trails avoid touch hover, stop offscreen/hidden/reduced-motion, use a bounded pool and clean up their frame/listener work.

• Server binds to 127.0.0.1. Order totals are recomputed server-side; body size and customer fields are validated; queued atomic writes avoid overlapping updates within one process. Saved demo orders omit submitted customer contact/address information. Newsletter does not create a subscription. These are local-demo protections, not production infrastructure.

Live-commerce release blockers

Real owner-approved products, ingredients/feeding/allergen information, inventory, contact details and legal/policy content remain necessary. Current six-product demo prices and shipping must not be confused with the separate one-SKU business plan. Before public selling, implement and test payment provider sandbox flow, server-side payment verification, idempotency, order status/fulfilment, refunds, authenticated administration, persistent transactional storage/backups, abuse controls and an actual personal-data handling policy. The present demo deliberately neither takes money nor dispatches goods.

Council outcome

Design peer and technical reviewer agreed: no demonstrated fatal local-demo defect; preserve the restored design. Prioritize bounded API waits, motion control, small-screen readability and repeat-action feedback. Technical review additionally prioritizes the measured image payload before changing page order. Actual browser/device verification remains the main evidence gap. No external communications, purchases, deployment or source fixes were performed.

Appendix: design and accessibility review

6 October 2026. Read-only source review using agency-accessibility-auditor and the previously loaded frontend skill. No website source was changed. Preserve the restored warm palette, handwritten typography, dog imagery, existing two-column mobile collection and playful brand personality. Do not reapply the rejected advanced.css redesign.

Scope and limits

Inspected main.jsx, Modal.jsx, motion.js, Experience.jsx, TreatScene.jsx and the current CSS cascade. Browser/local access was previously blocked; no Playwright or alternative access workaround was attempted. Actual rendering, contrast over images, touch hit-testing, zoom, screen-reader behaviour and real-device performance remain unverified. This is not a WCAG conformance certification. CSS files contain long compressed lines; references below identify both line and selector.

Ranked recommendations

P0 — none established for this demo by source inspection. This does not approve real commerce: the site explicitly uses sample recipes, prices, endorsements and demo checkout.

P1: Bound product loading and expose recovery

Evidence: src/main.jsx:21 fetches /api/products without an AbortController or timeout. The skeleton in main.jsx:33 remains while loading is true; launch.css:4 animates .product-skeleton indefinitely. A request that never settles leaves the shop unavailable and offers no Retry control. Recommended: bounded request with helpful timeout/retry state, retaining the current skeleton appearance. Test stalled request, offline, successful retry and a late earlier response. WCAG 4.1.3 status-message treatment is relevant; an actual failure is not asserted for a normally responding server.

P1: Make the visible pause control cover persistent decorative movement

Evidence: src/redesign.css:2 gives .floating-treat gentle-float 7s ease-in-out infinite; keyframes are on line 3. main.jsx:32 passes paused only to TreatScene. Thus pausing the 3D pouch does not pause the independently floating linked card. Reduced-motion CSS helps users who set an OS preference, but is not the same as an on-page pause mechanism for everyone. Stop the decorative float after a short entrance, or extend a clearly labelled motion toggle to it. Preserve the graphic and its placement. Relevant criterion: WCAG 2.2.2 Pause, Stop, Hide; verify actual simultaneous visibility and control behaviour in browser before making a final conformance finding.

P2: Increase essential small-screen text without changing the layout

Evidence: src/launch.css:6 sets mobile .product-tag to 8px, .product-meta to 9px, .product-bottom p and .add-button to 11px. Metadata contains pack weight and product type, not merely decoration. Proposal: target 12–14px for essential metadata and button labels, keep the existing two-column structure initially, allow comfortable wraps, and verify at 320/360/390/768px plus 200% text zoom. Small type alone is not a WCAG violation; the concern is readability and potential reflow/spacing failure (1.4.4, 1.4.10, 1.4.12). Do not assume overflow without rendering evidence.

P2: Refresh feedback for every Add action

Evidence: main.jsx:22 starts the 3.5-second dismissal timer only when toast changes; main.jsx:24 repeatedly sets the same “Added to your treat bag.” string. A second add during the visible toast does not change that state, restart the timer or reliably trigger a new live-region announcement. Recommend an event identifier or separate expiry timer, preferably a product-specific message; preserve the visual toast. Test three repeated adds, count updates, keyboard activation and screen-reader announcements. Relevant criterion: 4.1.3 Status Messages. Existing bag-count changes are helpful but not equivalent to guaranteed announcement.

P2: Reduce optional browsing friction while keeping the playful section

Evidence: main.jsx:32–33 places the hero, interactive Experience section and ticker before products. Hero “Shop the treats” and mobile dock already offer shortcuts; retain these. Hypothesis to test: a first-time mobile buyer may benefit from a shorter or initially collapsed optional play section, or a clearly visible “See the treats” anchor within it. Do not remove or reorder whole sections merely on this source review. Measure first product reach and task completion with five users before deciding; actual screen heights and scroll effort are unverified.

Secondary maintenance items

• main.jsx:30: newsletter request lacks a timeout and pending-submit lock. A stalled request can leave “Checking…” indefinitely and permit repeated submissions. Low impact in this demo because no real subscription is created; use the same bounded-request pattern when touched.

• main.jsx:20: stored cart is checked per row but is not deduplicated or capped across all rows. Corrupt/legacy local storage can yield duplicate product keys or a server-rejected cart. Normalise unique IDs and total quantity during hydration; this is resilience work, not evidence of a normal shopper exploit.

• main.jsx:39: the interactive “View bag” toast sits outside the modal and is correctly made inert while a modal is active. In product detail, adding a product can therefore show a visible but inactive toast action. Consider an in-modal bag link or a status-only toast while the dialog is open; verify actual stacking before prioritising. Do not weaken modal inertness to make an outside action clickable.

Existing safeguards worth preserving

Modal.jsx isolates siblings with inert, traps focus, handles Escape, restores focus and locks dismissal while checkout is pending. Checkout has a timeout and duplicate-submit ref. TreatScene has keyboard rotation/reset, reduced-motion handling, intersection/document-visibility suspension and cleanup. Experience uses bounded particles, passive pointer input, no touch-scroll interception, offscreen/hidden cancellation and reduced-motion guards. Motion reveals begin when entering rather than permanently hiding the whole document. Buttons and controls already have many explicit 44px minimum targets. Product prices and demo-only restrictions are exposed in text, and sample reviews are labelled as illustrative.

These safeguards are source evidence, not substitutes for assistive-technology testing. Verify modal transitions, focus return after removing a cart row, expanded FAQ navigation and dynamic status announcements when browser access is legitimately available.

Council decision proposed

First implement only the loading recovery and persistent-motion fix, then feedback and small-type adjustments. Keep appearance and two-column collection intact; treat optional section changes as a user-test decision. No claim of higher conversion is justified without measurement. Release check: mobile menu → filter → detail → add twice → bag → coupon → demo checkout → error/retry → success, keyboard and touch, with reduced motion enabled and disabled. No recommendation authorises deployment, real checkout, invented reviews or health claims.
