Broski / West Delhi

Complete execution masterplan within ₹2,00,000

Manufacturing • Packaging • Compliance • Pricing
Fulfilment • Marketing • Website • Cash control

Prepared 1 October 2026. Research checked 30 September–1 October 2026. India-focused; operating base: West Delhi, supplied by the founder. Founder time assumed 10 hours/week, based on the earlier brief.

Recommended route: one outsourced 200 g biscuit recipe; 500 accepted sealed packs; a narrowly serviceable prepaid pilot. A working website and generated branding exist. The physical product, supplier approval and live commerce are still to be established.

Generated packaging above is concept artwork. Prices, demand, delivery costs and timing are planning assumptions unless identified as a published benchmark. This document does not place supplier orders or certify legal clearance.

Your execution roadmap

West Delhi • ₹2,00,000 cap • 1 October 2026

01 / Your launch decision 3
02 / Scope and business model 4
03 / The ₹2 lakh cash envelope 5
04 / Price and unit economics 6
05 / 90-day scenarios and cash 7
06 / Manufacturing shortlist 8
07 / Supplier RFQ and selection 9
08 / Safe product release 10
09 / Packaging and print plan 11
10 / Label and compliance checklist 12
11 / Your eight-week critical path 13
12 / Customer validation and sales 14
13 / Marketing that fits the budget 15
14 / 30-day content and activity calendar 16
15 / Fulfilment and founder workload 17
16 / Website and payment launch gate 18
17 / Risk register and stop rules 19
18 / Your next seven days 20
22 / West Delhi launch route 21
23 / Suppliers, phones and buying briefs 22
24 / Differentiation and market experiments 29
13 / days 85–90 33
25 / Detailed finance and operating system 35
26 / Founder execution worksheets 44
27 / Integrated council decision 48
28 / One more label quotation 49
19 / Market price context 50
20 / Sources and verification 51
21 / Compliance and market sources 52

Start with the local route and supplier directory; use the worksheets before paying.

Contacts are published leads. Quotes, approvals and product demand remain unverified.

01 / Your launch decision

Start small enough to learn, safely enough to sell

Choose an existing manufacturer formulation with documented safety and stability, and have the factory fill and seal stock pouches. Launch one recipe and one pack size. Position Broski around companionship and enjoyable everyday rituals; make specific ingredient or nutritional claims only when supported.

Commitment	Working decision
Capital ceiling	₹2,00,000 gross cash; no extra owner funding assumed
Inventory	500 × 200 g accepted finished packs; target ₹85 landed/pack
Saleable stock	450 packs initially; 50 reserved for QA, evaluation, sampling/replacements
Offers to test	₹249 single + ₹59 freight; ₹449 two-pack; ₹649 three-pack delivered on approved lanes
Sales channel	Broski website + direct local discovery; prepaid-first
Timing	6–8 weeks conditionally; longer if stability, supplier or compliance evidence is missing
Protected reserve	₹30,000; do not spend it on a second SKU or cosmetic packaging

First milestone

Get one acceptable written manufacturing quote, one viable packaging specification, a qualified QA protocol and a signed-off label. Collect real customer willingness-to-pay evidence before purchasing inventory. A live-looking website alone is not a product launch.

Decision gate: No production deposit until recipe, pack, safety evidence, economics and legal applicability are approved. If the pilot MOQ or evidence costs cannot fit, reduce the run or delay it.

02 / Scope and business model

Route	Assessment under this budget
Contract-made existing recipe	Recommended. Lower equipment spend; supplier MOQ and documentation remain risks.
Own kitchen / small factory	Not the base plan. Fit-out, process control, labour, premises permissions and testing can consume the budget.
Bulk purchase + home repacking	Avoid as a shortcut. Repacking adds handling, traceability, sealing and regulatory responsibilities.
Finished-product resale	Possible fallback only with written private-label rights, valid evidence and actual margins. No relabeling without permission.

Customer hypothesis

First segment: dog parents reachable in one West Delhi serviceable cluster who buy small rewards for walks and training, value clear ingredient information and will pay for convenient bundles. Target behaviour before age or income stereotypes: recent treat buyers, willingness to read labels, and a reachable local pet community.

A realistic differentiation

• Clear, honest pack information and consistent lot quality; publish actual product images alongside approved ingredient and feeding details.

• Warm, memorable Broski branding plus responsive service. These are execution advantages, not a durable manufacturing moat.

• One easy bundle decision rather than six unvalidated flavours. Delay subscriptions, marketplaces and specialist health claims until repeat demand is measured.

Name availability has not been cleared. Search Broski and confusingly similar names before printing; keep an alternate name ready. Packaging changes become expensive after a large order.

03 / The ₹2 lakh cash envelope

Allocation	Cash cap
Samples, discovery and sample courier	₹12,000
Qualified formulation review + lab/QA	₹22,000
Accounting, classification, label/legal review	₹15,000
Artwork and actual product photography	₹10,000
Store, domain/hosting and payment setup	₹8,000
Scoped part-time pilot operations help	₹10,000
500 accepted packs × ₹85 landed	₹42,500
Outbound courier working float	₹22,500
Outer shipping material allowance	₹4,500
Payment fee allowance	₹3,500
Damage/refund/replacement allowance	₹5,000
Acquisition experiments	₹15,000
Uncommitted contingency	₹30,000
TOTAL	₹2,00,000

All amounts are gross cash ceilings including applicable vendor taxes. Supplier quotes are not secured. The ₹42,500 stock line already includes primary pouches, labels, factory packing and inward freight/tax assumptions; do not add them again. Outer ecommerce cartons are a separate cost.

Setup/operations caps total ₹77,000. Variable fulfilment/fee/loss float totals ₹35,500. An allowance is not an instruction to spend it all. The ₹8,000 technical cap requires a scoped quote using existing assets or a managed checkout fallback; custom production engineering may cost more.

04 / Price and unit economics

Prices below are test hypotheses and supersede neither actual supplier quotes nor tax advice. Model a registered seller with 18% output GST included in gross collection and no usable input credit, pending current classification confirmation. The final tax position must be checked before invoicing.

Offer	Collection	Net tax scenario	Landed stock	Courier	Pre-ad contribution
1 pack(s)	₹308.00	₹261.02	₹85.00	₹65.00	₹70.75
2 pack(s)	₹449.00	₹380.51	₹170.00	₹75.00	₹91.91
3 pack(s)	₹649.00	₹550.00	₹255.00	₹85.00	₹161.68

Every order also includes ₹18 outer packing, 2.36% payment fee on gross collection, and ₹15 expected loss allowance. Razorpay publishes a standard 2% platform fee plus 18% GST on the fee [S1]. Courier ₹65/75/85 are planning placeholders, not quotes. Weigh the fully packed parcels; two packs may exceed the 500 g slab.

Choose a margin rule

The single-pack offer contributes only about ₹70.75 before acquisition. At ₹80 acquisition spend/order it loses money. Lead paid experiments with bundles; use single packs mainly for organic/local trials. Do not stack WELCOME10 onto these prices without recalculating the margin.

Decision gate: Prefer observed blended acquisition spend ≤₹60/order and positive delivered-order contribution. Treat ₹108.61 blended pre-ad contribution as a zero-margin ceiling, not a safe CAC target. No invented lifetime value.

05 / 90-day scenarios and cash

Illustrations start at project kickoff, so a 6–8 week preparation period leaves roughly 5–7 selling weeks. Mix: 20% single, 50% two-pack, 30% three-pack. This gives 2.1 packs/order and ₹480.80 gross collection/order. All illustrated orders are delivered, prepaid and settled; no reorder is counted.

Acquisition assumptions per delivered order: slow ₹120; working ₹80; strong ₹55. Contribution = collection ÷ 1.18 − landed packs − courier − ₹18 outer packing − 2.36% of collection − ₹15 loss allowance − acquisition spend.

Case	Orders	Packs sold	Gross receipts	After ad contribution	Operating result	Cash remaining
Slow	40	84	₹19,232	₹-456	₹-81,706	₹87,184
Working	100	210	₹48,080	₹2,861	₹-78,389	₹101,211
Strong	200	420	₹96,160	₹10,722	₹-70,528	₹126,922

Operating result deducts ₹77,000 setup/operations and conservatively expenses all 50 reserved packs (₹4,250). Some retained/replacement packs may remain inventory in actual accounting. Founder labour and income tax are excluded. These are startup losses, not profit projections.

Cash remaining is after the full 500-pack purchase, setup/ops, modeled fulfilment, acquisition and tax/loss reserves. It includes protected contingency and stock remains separately; it is not free profit. Replace reserve assumptions with actual invoices/events, rather than double-counting them.

Stress test

A 15% stock-cost increase cuts blended contribution by ₹26.78/order; ₹20 extra freight cuts it by ₹20. Combined, pre-ad contribution falls to ₹61.84. At ₹80 acquisition cost that loses ₹18.16/order. Stop or reprice; do not increase ad spend to chase revenue.

Decision gate: At ₹60 acquisition, about ₹48.61 contribution/order remains; recovering ₹81,250 illustrative setup/sample expense would take roughly 1,672 comparable orders, requiring additional funded stock. Pilot success is evidence, not startup-cost recovery.

06 / Manufacturing shortlist

Candidate	Evidence and fit	Next question
B&K Products / B&K Nutrifeeds, Thane	Official site lists biscuit OEM categories. Direct biscuit match [S4].	Will it supply 500 accepted 200 g domestic packs? Price, MOQ and lead time unpublished.
Furry Feast	Private-label dehydrated treats; site advertises from 5 kg/SKU [S5]. Adjacent category.	Biscuit capability unconfirmed. Resolve 15-day banner vs 3–5 week FAQ and exact MOQ.
Al Moin Exports, Hapur	Official OEM/private-label meat treats [S6]. Adjacent category, export-oriented.	Domestic startup supply and biscuit capability unconfirmed. Do not apply its offer to biscuit economics.

No supplier has been approved or contacted. Only B&K; is a direct biscuit lead supported by the reviewed site. If it declines, seek additional biscuit OEM quotes; do not quietly substitute meat-treat pricing. No numerical pilot manufacturing quote has been verified.

The brief to send

• One existing validated biscuit formulation; complementary reward, not an assumed complete diet. Qualified specialist reviews ingredient, allergy, age and feeding suitability.

• 500 accepted sealed 200 g packs. Nominal fill is 100 kg; process loss, overfill and retained samples mean 100 kg bulk input does not guarantee 500 usable packs.

• Factory packs, seals and lot-codes approved barrier pouches. Target ₹75–95 landed/accepted pack includes product, primary packaging, labels, packing, master cartons, inward freight and nonrecoverable tax.

Decision gate: If landed cost exceeds ₹95 or MOQ requires unaffordable stock, request a smaller viable run or change the plan. Keep QA and reserve protected.

07 / Supplier RFQ and selection

Subject: Broski India pilot — 500 × 200 g dog biscuit packs, existing validated formulation

We are evaluating a domestic manufacturing partner. Please quote one biscuit SKU using an existing formulation with safety/stability evidence, packed at your facility in approved stock barrier pouches with our labels. This enquiry is not an order.

Ask for	Why it matters
Identity and scope	Legal entity, plant address, bank beneficiary, domestic supply authority and applicable certificates/permissions.
Itemized quote	Recipe, pouch, paired labels, filling/sealing/coding, cartons, taxes, inward freight to our PIN, testing exclusions.
Quantity	Sample MOQ, production MOQ, 500 accepted packs, rejects/wastage/retained sample allowances, actual net fill.
QA evidence	Recipe revision, process controls, ingredient/lot traceability, recent COA, stability in exact final pack, audit access.
Timing	Sample, proof, production and evidence lead times; quote validity; realistic dispatch date.
Commercial terms	Deposit, balance, change control, defect replacement, recall cooperation, recipe/brand rights.

Score quotes only after identity and documentation pass: QA/evidence 35%, total landed economics 25%, recipe/pack fit 15%, startup MOQ 10%, reliability/timing 10%, commercial terms 5%. A critical QA failure is disqualifying regardless of score.

Decision gate: Proposed deposit/balance terms are negotiation requests, not accepted policies. Never pay a personal beneficiary unrelated to the verified contracting entity. Compare GST and freight on the same basis.

08 / Safe product release

Do not formulate by copying internet recipes. Use a qualified pet-food technologist and a veterinarian with relevant nutrition expertise to assess the manufacturer's formulation and intended use. Budget ₹22,000 for the agreed review/testing scope; secure quotes before assuming that scope fits.

Gate	Required evidence
Recipe and process	Signed formulation revision, ingredient traceability, allergen controls, relevant heat/process validation and change-control records.
Testing protocol	Qualified lab specifies microbiological, chemical, moisture/water-activity and ingredient-dependent contaminants; methods and acceptance limits agreed in writing.
Shelf-life evidence	Exact recipe + exact final pouch + storage conditions. Existing validated evidence can support review; a new formulation may need longer studies.
Factory batch	Lot COA, production date, approved coding, count/weight checks, sealed packs and manufacturing records.
Receipt and release	No pests, mould, rancid smell, wrong labels, broken seals or untraceable lots. Quarantine failures; retain agreed samples.

TÜV SÜD India describes pet-food/animal-feed shelf-life work [S9]; it is a laboratory lead, not a booked service or price quote. Verify the actual lab's accreditation scope for the commissioned methods. Specialists define acceptance thresholds; this plan does not invent universal limits.

Complaints and withdrawal

For suspected contamination, illness, foreign matter or a serious seal failure: stop selling the affected lot, preserve evidence, contact the manufacturer/specialist, trace buyers and record advice/actions. Withdraw or recall as directed. Do not diagnose an animal or dismiss a safety complaint as a refund issue.

Decision gate: Do not print a 6- or 12-month shelf life by borrowing a competitor date. Failed evidence moves the launch date; it does not reduce the test scope.

09 / Packaging and print plan

Use a stock opaque or metallized stand-up pouch with zipper and heat seal, plus digitally printed front/back labels. The zipper supports reclosure; it is not the unopened safety seal. The manufacturer should pack at its assessed facility.

Component	Specification / budget approach
Retail pouch	Fit test 200 g of actual biscuits, including headspace and seal clearance. Request material structure, food-contact/migration documentation, thickness, OTR/WVTR and seal parameters.
Published benchmark	Restokart silver/clear 5 × 8.25 in pouch: ₹3.74/unit, pack 100 [S7]. 500 = ₹1,870 before unshown tax/freight. Its clear face is not automatically suitable for shelf life.
Front/back labels	HelloPrints search-indexed result advertises MOQ 100 [S8]; direct-page terms and current MOQ need confirmation. ₹4–8/paired labels is an RFQ assumption, not a verified price. Allow proof and agreed wastage.
Factory economics	Planning components within ₹75–95 landed: pouch ₹5–8, paired labels ₹4–8, product/packing ₹55–65, inward/carton/tax allowance ₹11–14. Remove included duplicates.
Dispatch pack	Protect biscuits against crushing. Packed dimensions/weight determine courier slab. ₹18/order modeled for outer material.

Buy sample pouches before artwork. Ask factory to price about 550 pouches and label pairs if its wastage plan requires it; that is packaging quantity, not 550 purchased finished retail packs. Avoid custom printed-film cylinders and multi-thousand pouch MOQs initially.

Print proof gate

Approve actual dimensions, colour, readability, barcode if used, batch window and mandatory declaration sizes with the reviewer. Keep a signed physical proof. Generated Broski pack images guide visual direction; they are not print-ready compliant files or proof of recyclability.

10 / Label and compliance checklist

The Food Safety and Standards Act defines food for human consumption and excludes animal feed [S10]. A human-food FSSAI licence is therefore not a default answer for dog treats. Confirm the actual pet-treat business, plant and local requirements with competent professionals/authorities.

Workstream	Action before launch
State/local operation	Identify city, storage/packing roles and supplier premises; confirm applicable trade, establishment, manufacturing/animal-feed and other permissions.
BIS	IS 11968:2019 is a pet-food standard [S11]. Confirm scope for complementary biscuits and whether any applicable mandatory order/certification exists; do not self-claim certified status.
Legal Metrology	Reviewer confirms manufacturer/packer responsibility and registration, net quantity, MRP inclusive of taxes, identity/address, consumer care, dates and applicable unit-price/ecommerce declarations [S12].
GST	CA confirms current HSN, rate, registration, interstate/ecommerce position, input credit and shipping invoicing. This model's 18% remains provisional: the historical CBIC FAQ was found, but current amended notifications were not fully reconciled [S18–S19].
Plastic packaging	Map Brand Owner vs Producer/Importer status. CPCB FAQ discusses micro/small Brand Owner EPR relief, not a universal exemption for every MSME role [S13].
Brand/IP	Search and clear name before artwork. Eligible trademark e-filing government fee published at ₹4,500 per class/application [S14]; professional/search fees extra. Udyam registration is free [S3].

Back label: approved ingredients/allergens; substantiated analytical/use/feeding/storage information; manufacturer/packer and marketer details; consumer care; traceable lot; manufacture/packing and justified best-before information; approved MRP and applicable declarations. Front: accurate name, dog-treat use, net 200 g, brand. A final legal label review is required.

Decision gate: Do not print therapeutic, complete-and-balanced, hypoallergenic, dental or “vet approved” claims, certification marks or generated endorsements without substantiation and permission.

11 / Your eight-week critical path

Window	Outcome and owner	Release condition
Week 1	Founder: start buyer interviews, three RFQs, city/channel choice, name search, initial CA scope.	Comparable quotes and evidence checklist; no stock deposit.
Weeks2–3	Founder completes 20 interviews; manufacturer + specialist: samples, recipe review, pouch fit/transit test, lab scope and label requirements.	Spend within ₹12k sample + ₹22k QA + ₹15k review caps; pause if scope cannot fit.
Weeks3–4	Founder: approve recipe/spec/print proof and select vendor; tech contractor finalizes real checkout scope.	Signed agreement, cost model viable, supporting stability evidence and label approval.
Weeks4–6	Manufacturer produces accepted pack target; founder prepares real content, partner sampling and fulfilment SOP.	Payment milestone tied to documented progress/accepted scope.
Weeks6–8	Specialist/founder: receive, quarantine/check, release stock; provider sandbox, refund and courier tests.	QA release, permissions/label done, actual parcel rates and customer-service contacts.
Weeks8–13	Founder/helper: limited paid pilot, delivered-order economics and genuine feedback.	Release ads in ≤₹3k tranches; expand only with positive economics.

Dates are estimates, not booked supplier promises. New recipe/pack stability evidence may extend the timeline substantially. Today’s launch activity can be customer discovery and a truthful waitlist; paid sales begin only after the release gates pass.

Budget release discipline

Discovery/QA/review caps total ₹49,000. Inventory/creative/store caps total ₹60,500. Help and variable float are released as operations need them. Contingency stays separate. Track committed, paid and remaining amounts weekly; a deposit is still committed cash.

12 / Customer validation and sales

Before production, interview 20 recent treat buyers in your West Delhi serviceable cluster. Ask what they actually bought, price/pack weight, frequency, delivery friction, rejected products and label concerns. Show sample visual concepts as concepts and the proposed prices; do not claim a manufactured product already exists.

Question	Record
Last treat purchase?	Brand, weight, actual amount paid, channel/date.
What made you choose it?	Ingredient clarity, habit, dog acceptance, convenience, recommendation.
What would stop you buying Broski?	Price, unknown brand, quality proof, recipe suitability, delivery charge.
₹249 + freight / ₹449 two / ₹649 three?	Chosen offer and reason; preference is not an order.
Would you trial after approved samples?	Consent and contact preference; no unsupported outcome promises.

Working validation gate: at least eight interviewees show credible trial intent at the proposed economics, and at least two relevant local groomer/pet-store partners accept a structured small trial discussion. These are planning thresholds, not proof of product-market fit; record evidence and objections.

Pilot channels

• Use one direct storefront and consensual local community discovery. Ask permission before posting in pet groups.

• Partner samples come from the 50-pack reserve; obtain owner consent and specialist-approved use guidance. Keep lot records.

• Delay marketplaces until channel fees, paperwork, reviews and stock replenishment are affordable. No paid fake reviews or bulk unsolicited messages.

13 / Marketing that fits the budget

Work	Execution	Measure
Founder content	Real batch photos, pack details, dog-parent rituals, founder story. Generated art can be mood imagery, not real stock proof.	Useful replies, qualified clicks, consenting trial leads.
Local partnerships	3–5 groomers/pet stores/community hosts; short agreed sample pilot and customer feedback.	Delivered first orders and actual partner cost.
Small paid tests	Initial ≤₹3,000, mainly bundles, approved serviceable geography. Test2 creatives before more spend.	Delivered-order contribution after spend, not only clicks/ROAS.
Retention	Opt-in reorder reminder at a realistic consumption interval; easy unsubscribe and direct support.	Measured second purchases by cohort, not assumed LTV.

Stop paid tests if delivered-order contribution turns negative, quality complaints emerge or cash commitments threaten the reserve. A low click cost does not offset poor conversion, freight or returns. Track spend / all delivered orders as blended acquisition cost; calculate new-customer CAC separately when repeat orders appear.

Message structure

Hook: “For the friend who makes every day better.” Proof: real product, clear ingredients and qualified supported feeding information. Offer: verified price/weight/delivery. CTA: “Choose your little ritual.” No invented customer totals, medical promises or “best in India” assertions.

Review collection

Invite genuine feedback after confirmed delivery. Ask permission before publishing name/photo. Disclose gifted samples/incentives and never make them conditional on a positive review. Replace the website’s sample diaries with authentic feedback or remove the section before treating it as social proof.

14 / 30-day content and activity calendar

Run this after sale-ready stock and checkout are verified. Use Instagram/Reels plus the website; repost selectively. Publishing time is a test: compare lunchtime vs evening from your own audience analytics rather than promising a universal optimal time.

Days	Posts / activity	Purpose
1–3	Founder introduction; actual 200 g pack unboxing; approved ingredient explainers.	Explain product truth and offer.
4–6	“Walk, wag, little reward” Reel; how to reseal/store; answer a real FAQ.	Useful content and routine.
7	Live Q&A / short founder answers; week 1 metrics review.	Discover objections; change weak copy.
8–10	Behind-the-scenes factory-approved footage; bundle comparison; customer question thread.	Process evidence and easy choice.
11–13	Partner trial story with disclosure; packaging demo; real dog-parent routine (consent).	Trust without fabricated claims.
14	Review spend, delivered margin and support issues; pause failing creative.	Capital protection.
15–18	Three genuine feedback themes; customer-permitted photo; “What’s your little ritual?” poll.	Learn and retain.
19–21	Dispatch promise explainer; feeding FAQ approved by specialist; bundle creative B.	Reduce checkout doubts.
22–25	Founder lessons; label walkthrough; reorder reminder to consenting buyers; community reply day.	Repeat behaviour and service.
26–30	Pilot recap with actual numbers; remaining stock; questions; next month decision.	Transparent progress and cash gate.

Time-capped cadence: two useful posts/week, including one short video from the same shoot, within the founder’s one-hour content allowance. Support uses its separate founder/helper allocation. Reduce cadence if fulfilment needs the time. Capture actual stock/delivery facts; do not simulate popularity or scarcity.

15 / Fulfilment and founder workload

Founder activity	Weekly time
Supplier, QA and product issues	2h
Customer discovery/acquisition	3h
Content and offer approval	1h
Cash, settlements and tax reserve	1h
Customer exceptions	1h
Helper coordination and dispatch audit	1h
Buffer	1h

₹10,000 helper allowance is a scoped pilot contractor budget, not a guaranteed full-time salary. Obtain a quote for packing labels, dispatch and routine support; manufacturer, accountant and specialist retain their roles. At 200 orders over 5–7 selling weeks, expect roughly 29–40 orders/week and check that capacity fits.

Daily operating sequence

• Reconcile paid orders to gateway settlement and stock; reject/resolve unsupported PIN codes before accepting an order.

• Pick by earliest expiry; record lot per order. Inspect seal/condition, pack against breakage, weigh parcel and create courier label.

• Send truthful dispatch/tracking information; monitor failed attempts and customer exceptions. Publish a realistic dispatch promise, not assumed next-day shipping.

• Log complaints, returns, damage and replacements by lot. Keep minimal customer data, restricted access and retention policy.

Use a shared stock ledger with date, batch, best-before, opening stock, receipt, sold, QA/sample use, damage, returns, replacement and closing stock. Founder checks physical inventory weekly. Use prepaid pilot orders to limit COD fees and RTO exposure.

16 / Website and payment launch gate

The saved Broski site currently has generated branding, motion, catalog, cart and demo checkout. Its demo API deliberately does not retain fulfilment contact details and does not collect money. Those choices must change through a scoped production implementation before real orders can be fulfilled.

Gate	Required completion
Catalog truth	One approved SKU initially; actual photos, final ingredients/weights/price and qualified feeding/storage information. Hide undeveloped flavours.
Seller and policies	Real legal/seller identity, email/phone, serviceable locations, shipping, cancellation/refund, privacy and grievance/support details reviewed for applicability.
Payment	Provider onboarding; server-created amount; signed webhook verification; idempotency; paid/pending/failed/refunded states. Never dispatch from a browser success redirect alone.
Customer/order storage	Secure persistent minimum fulfilment data, access controls, backups, lot tracking and approved privacy/retention handling.
Delivery	Actual PIN/rate/weight rules, stock availability and truthful dispatch estimates.
Verification	Sandbox payment/failure/refund tests; controlled real order; mobile cart/forms, accessibility/reduced motion, shipping errors and no duplicate orders.

Use a fixed quote within the ₹8,000 technical cap. If the custom site cannot be safely completed within scope, use a reputable managed checkout/order tool after assessment and keep the site as the brand front. Subscription fees and staff handling still count against the cap; do not deploy insecure order collection to save money.

Decision gate: Generated artwork and sample reviews must be identified appropriately. Business details and payment setup were deferred in the website task; this plan does not assume they are complete.

17 / Risk register and stop rules

Risk	Trigger	Response
Supplier MOQ/cost	No viable 500-pack quote or landed cost >₹95	Reduce scope/run; reprice; defer. No uncontrolled equipment spend.
Shelf-life / QA	Evidence missing, failed test, seal/contamination issue	Quarantine/stop release; specialist review. No date shortcut.
Poor economics	Actual delivered margin negative after acquisition	Pause ads; revise bundle/freight/pricing or stop.
Freight surprise	Packed slab/route cost above allowance	Narrow lanes; charge freight or reject route before payment.
Stock ageing	Slow sell-through vs supported expiry	Stop reorder; adjust ethical sampling/channel plan within safe dates.
Label/legal ambiguity	Authority/professional cannot confirm required route	Resolve before print/sale; revise timeline.
Brand/IP	Confusingly similar name or challenged rights	Change before print; keep alternate ready.
Cash tied up	Tax/refund/payables consume operating balance	Hold contingency; spend by milestone; no gross receipt-funded assumptions.

Reorder conditions

Known actual landed/freight costs; quality complaints resolved; genuine repeat-buy evidence; stock/expiry reconciled; cash forecast covers supplier, tax and refunds while preserving ₹30,000. Another hypothetical 500-pack batch costs ₹42,500 and is not included in the pilot scenarios. Reduce MOQ if commercially possible or stop at pilot completion.

Return/refund rules must reflect actual law and seller policy. For damaged/wrong/unsafe goods, handle evidence and resolution fairly; do not invent a blanket “no returns” rule for cost control.

18 / Your next seven days

Day	Action	Output
1	Choose operating city, available storage and owner role; create cash ledger.	One-page assumptions + committed/paid budget.
2	Search name/rights; request professional local classification/label scope.	Review quote and questions; alternate brand name.
3	Send three manufacturer RFQs; compare local packaging/sample providers.	Itemized written quotes; no PO yet.
4	Start 3–4 short buyer interviews; record last purchase and bundle objections.	Evidence notes, no invented demand.
5	Continue interviews across weeks 1–3; approach 2 local partners for a disclosed future trial.	Trial interest and practical channel costs.
6	Compare samples/QA/lab protocol and test packed shipping weight assumptions.	Specific sample/testing plan within caps.
7	Review economics, evidence and quotes; decide proceed/pause/smaller pilot.	Signed decision; release only approved next tranche.

Before the first commercial shipment

• Approved product, batch release, supported shelf-life and exact print proof.

• Seller/local/tax/packaging roles resolved; actual business contacts and policies published.

• Accepted stock, lot tracking, real checkout and paid-order reconciliation working.

• Actual courier serviceability, parcel weight/rates and customer-support procedure.

• Marketing facts checked; real reviews/consent only; reserve remains ring-fenced.

Success criterion for the pilot: safe and reliably delivered stock, clear actual economics, genuine customer feedback and a funded next decision. A polished brand is the starting asset; disciplined product release and cash control make it a business.

22 / West Delhi launch route

Start in one reachable cluster near your actual dispatch address. Rajouri Garden, Janakpuri and Paschim Vihar are examples to evaluate, not researched partner commitments or automatically serviceable delivery zones. The exact dispatch PIN and suitable storage premises remain unknown.

Sequence	Action and measurable output
First 72 hours	Choose dispatch PIN and 3–5 nearby serviceable PINs. Map five potential groomers/pet shops and two permitted communities using public business channels. Record travel time.
Supplier sequence	B&K for documented biscuit OEM feasibility; Mannu-G Meerut for verification-first backup. Restokart Gurugram, Printo Graphics Delhi and Packman Greater Noida for local packaging comparisons. Proximity does not replace evidence.
Local demand test	20 short interviews across weeks 1–3. Start with recent treat buyers outside only friends/family. Ask price-specific objections before ordering stock.
Local delivery test	Get written quotes for fully packed 1/2/3-pouch parcels from the actual dispatch PIN. Compare door-to-door delivery with prepaid pickup at a willing partner. Budget partner handling and founder travel.
Launch promise	Publish only verified PINs, shipping charge and dispatch window. Avoid same-day/next-day promises until tested. A pickup site requires written permission and appropriate handling.
Expand	Open adjacent PINs only after delivered-order margins and service reliability pass. Keep ₹30,000 reserve protected.

A West Delhi focus is a strategy hypothesis: lower coordination burden, easier relationship building and short feedback loops. Delivery may still cost more than the base assumptions. Do not infer demand, cheap rent, regulatory approval or low freight from the location.

Who owns the work

Founder: supplier selection, cash, customer conversations and final approvals. Manufacturer: approved production and sealing/coding. Qualified specialist/lab: appropriate product protocol and evidence interpretation. Local adviser/CA: actual premises, tax, registration and label applicability. Scoped helper: dispatch/support within ₹10,000. No paid employee or dedicated rented premises is funded.

23 / Suppliers, phones and buying briefs

Checked **1 October 2026**. This is a focused shortlist of **11 leads across manufacturing, packaging and testing**, not an exhaustive India directory or an approved supplier list. Public website statements are supplier claims, not factory audits. No calls, messages, sample orders or purchases have been made. Unknown fields are deliberately marked unknown. A telephone number is not labelled WhatsApp unless the source expressly identifies it as such.

The business-strategist skill was applied to separate evidence, assumptions and release gates. Read alongside manufacturing-packaging.md; this directory improves contact coverage and does not replace its QA/contract requirements.

Decision and first-call priority

1. **B&K:** first biscuit OEM feasibility call. Ask for 500 accepted, sealed 200 g packs using a documented existing recipe, not merely 100 kg bulk.

2. **Amul Packaging and Swiss Pac:** compare stock opaque barrier-pouch samples/specifications. Restokart supplies a useful low-quantity price benchmark, but its clear-front construction is not pre-approved for shelf life.

3. **Printo:** compare physical label proofs and paired-label cost; **Packman** for protective shipping cartons once filled-pouch dimensions are known.

4. **TÜV SÜD:** obtain a product-specific test/stability quotation and sample plan before committing to manufacturing. Final methods, limits and retained quantities need expert agreement.

5. **Mannu-G:** verification-first biscuit lead, not a deposit-ready alternative. Furry Feast and Al Moin are adjacent treat fallbacks requiring a different product/economics decision.

Pilot landed-cost target **₹75–95 per accepted 200 g pack** remains an assumption, not any supplier's quote. At ₹85, 500 packs consume ₹42,500. This must include product, pouch, labels, factory packing/sealing/coding, master cartons, inward freight and non-recoverable tax. One-time samples, specialist work, testing and individual-order shipping are separate. The ₹22,000 QA/testing budget in the master model is also unquoted. Do not spend the ₹30,000 contingency to conceal an uneconomic MOQ or inadequate safety evidence.

Manufacturing leads

1 — B&K Products / B & K Nutrifeeds: strongest direct biscuit fit

• **Fit/evidence:** official dog-biscuit page describes OEM meaty, veggie, grain-free and functional biscuit categories. Request an existing, appropriately documented reward-biscuit option; marketing category names do not substantiate Broski claims.

• **Phone:** +91 9819224413; +91 9833910310. **Email:** sales@bnkproducts.com. **WhatsApp:** not confirmed in checked source.

• **Published address:** 203, A8, Kripa Industrial Complex, Village Sonale, Taluka Bhiwandi, Thane, Maharashtra 421302, India.

• **MOQ/price:** no verified numerical pilot MOQ or price. Domestic 500-pack acceptance, pack procurement and lead time require RFQ.

• **Sources, checked 1 Oct 2026:** dog-biscuit capability, contact.

• **First question:** “Can your Indian contracting entity deliver 500 accepted 200 g retail packs under Broski, using an existing validated formulation and final-pack stability evidence?”

2 — Mannu-G / Mannuji: conditional biscuit lead, enhanced diligence

• **Fit/evidence:** search-indexed official puppy milk-flavour dog-biscuit listing explicitly offers private label. Direct product retrieval returned a PHP error. Do not infer suitability from its feeding or nutrition copy.

• **Phone and expressly published WhatsApp Business:** +91 9958228588. **Email:** info@mannuji.in.

• **Published factory address:** Khasra No. 520, Village Acchronda, Gagole Road, Partapur, Meerut 250103, Uttar Pradesh; sourced from its careers page, confirm with selling entity.

• **MOQ/price:** export contact FAQ says biscuits/cookies 50 cartons; dog-biscuit-specific carton contents, domestic pilot MOQ and price unknown. General 7–14-day export timing is not a confirmed Broski commitment.

• **Caution:** export pages contain inconsistent generic MOQ wording and placeholder-looking licence/GST fields. This does not establish wrongdoing; it makes independent legal-entity, bank-name, plant and document verification mandatory before any payment.

• **Sources, checked 1 Oct 2026:** advertised biscuit OEM product, export contacts, factory-address source, page containing document inconsistencies.

3 — Furry Feast: dehydrated-treat fallback, not biscuit-confirmed

• **Fit/evidence:** white/private-label single-ingredient dehydrated treats. A switch requires revised serving weight, pricing, safety and customer positioning.

• **Email:** care@furryfeast.in for private label; footer also publishes furryfeastshq@gmail.com. **Phone/WhatsApp/street address:** not reliably obtained from checked accessible material; request legal entity and plant address before sampling.

• **MOQ/price:** banner says from 5 kg/SKU; FAQ makes MOQ product/pack-dependent. No verified OEM price. Banner's 15-day average conflicts with FAQ's 3–5 weeks after artwork for existing products and 6–10 weeks custom; get a dated written schedule.

• **Source, checked 1 Oct 2026:** private-label service and contacts.

• **First question:** “What exact domestic MOQ and final-pack evidence apply to this specific product, and which stated lead time governs our quotation?”

4 — Al Moin Exports: export-oriented adjacent chew supplier

• **Fit/evidence:** private-label dehydrated meat chews; not a verified biscuit line. Contact-page footer says 100% Export Oriented Unit. Confirm legal domestic-supply eligibility before further evaluation.

• **Public WhatsApp-linked number:** +91 7505294317. **Email:** exports@almoinexports.com.

• **Published plant:** Industrial Area Phase 2, Hapur, Uttar Pradesh 245101, India. US corporate entity also listed; establish which entity would contract/invoice.

• **MOQ/price:** unknown for domestic pilot. International sample/courier offer does not establish a free domestic sample entitlement.

• **Sources, checked 1 Oct 2026:** OEM service, contact/address/WhatsApp.

Pouch vendors

5 — Restokart: low-quantity benchmark

• **Phone:** +91 9599006312; +91 9599006315. **Email:** sales@restokart.com. **WhatsApp:** not confirmed.

• **Registered address:** 124 P, Sector 51, Gurgaon 122003, Haryana, India.

• **Listed product:** 5 × 8.25 inch silver/transparent stand-up zipper pouch, described as 200 g; pack of 100, ₹3.74/piece for the displayed 1–1,000 tier. Thus 500 = ₹1,870 before any unspecified tax/freight. This is a website benchmark, not a delivered quotation or stock reservation.

• **Material evidence:** silver face PET/AL/PE; clear face PET/PE. Clear-face barrier and actual biscuit capacity need validation; do not assume 200 g of bulky biscuits fits because the catalogue says 200 g.

• **Sources, checked 1 Oct 2026:** product/specification/price, contact.

6 — Amul Packaging: stock-pouch RFQ priority

• **Fit:** official contact page lists stock stand-up, zipper and laminated pouches.

• **Phone:** +91 9004382696. **Email:** Sales@amulpackaging.in. **WhatsApp:** source has an official WhatsApp button; use that button, not an inferred number.

• **Office:** 2, Pramod Prasad Building, Plot 232, next to Brij Albela, Wadala (W), Mumbai 400031. **Factory:** Bldg P4, Plot P, Shree Raj Laxmi Industrial Estate, Sonale Village, Bhiwandi, Maharashtra 421302.

• **MOQ/price:** stock 500/600-piece availability, opaque laminate, barrier data and delivered price unknown. Potential location convenience with B&K is an inference, not a confirmed commercial relationship.

• **Source, checked 1 Oct 2026:** official capabilities/contact.

7 — Swiss Pac / Swiss Online: second pouch/specification quote

• **Phone, packaging sales:** +91 6357683707; +91 9240249437. **Email:** info@swissonline.co.in; India inquiry also lists info@swisspack.co.in. **WhatsApp:** sales number not independently confirmed as WhatsApp; use source's designated links if needed.

• **Address:** Swiss Pac Pvt. Ltd., Baroda Jambusar Highway, Dabhasa Village, Taluka Padra, Vadodara, Gujarat 391440.

• **Fit:** flexible/stand-up pouch supplier with sample-order guidance. **MOQ/price:** chosen stock SKU, samples, tax, delivery and order increment unconfirmed. Do not assume a free sample kit: contact page also shows sample-payment instructions.

• **Source, checked 1 Oct 2026:** contact, addresses and sample routes.

• **First question:** “Which opaque stock pouch can support our expert's barrier requirement in 200 g actual biscuit fill, with documented food-contact suitability and no custom-print cylinder?”

Labels and shipping cartons

8 — Printo: low-volume label proof and price comparison

• **Phone:** +91 9513734374. **Email:** care@printo.in. **WhatsApp:** official label page includes a bulk-order WhatsApp link; no number inferred here.

• **Published postal address:** No. 320/3/5, Siddappa Layout, 1st Main, Bommanahalli, Bangalore 560068. Confirm destination/store before couriering proofs.

• **Listed benchmarks:** food labels ₹5 each for 50 pieces; product-packaging labels ₹6 each for 50. These are category examples, not the price of Broski's exact two sizes/materials. Paired front/back labels may exceed the prior ₹4–8 combined assumption at small proof quantities. Obtain quantity-500-per-design quote.

• **Sources, checked 1 Oct 2026:** label products/prices, phone/address, email/phone.

• **Buying note:** use main printo.in, not its printopro test site. Request physical proof, rub resistance, adhesive compatibility and replacement terms.

9 — Printo Graphics: Delhi sticker alternative, separate business

• **Fit:** official site lists barcode, polybag, price and carton-marking stickers; confirm decorative front/back pouch-label capability and suitable adhesive.

• **Phone:** +91 9811284889; +91 9910165459. **Email:** office@printographics.in; footer also printographics011@gmail.com. **WhatsApp:** not confirmed.

• **Address discrepancy:** contact section gives Z-32, Okhla Industrial Area Phase II, New Delhi 110020; footer gives Z-20. Confirm pickup/invoice address before sending anything.

• **MOQ/price:** unknown; RFQ 500 of each of two designs plus proofs.

• **Source, checked 1 Oct 2026:** official products and contact.

10 — Packman Packaging: corrugated shipping and master cartons

• **Fit:** supplier's official catalogue footer lists corrugated boxes/rolls and courier packaging. Ask for plain stock protective cartons; avoid decorative rigid gift boxes for pilot economics.

• **Phone and expressly identified WhatsApp:** +91 8512014000. **Helpline:** 1800 270 7225. **Email:** support@packman.co.in.

• **Published India address:** 293, Ecotech Extension 1, Greater Noida, Uttar Pradesh 201308.

• **MOQ/price:** exact box dimensions, grade, 50/100-quantity increments, compression strength and landed price unknown. Do not apply ₹100 placeholder prices from unrelated custom-box pages.

• **Evidence limitation:** homepage returned 403; contact details came from search-indexed official product-page footer, with older crawl age. Reconfirm by phone before payment.

• **Source, checked 1 Oct 2026:** official catalogue/contact footer.

Testing

11 — TÜV SÜD South Asia: pet-food stability/testing enquiry

• **Phone:** 1800 212 2000. **Email:** info.in@tuvsud.com. **WhatsApp:** not confirmed.

• **Locations:** food-testing page lists Bengaluru and Gurugram laboratories. Exact sample-receiving street address/contact must be obtained with the quotation; do not send to an unrelated office.

• **Fit/evidence:** shelf-life service explicitly includes pet food/animal feed; nutritional, microbiological, stability and package questions can be scoped with its specialists. Accreditation must cover the actual laboratory, matrix and commissioned methods.

• **Price/turnaround/sample mass:** unknown. Ask for itemized initial safety, label analysis, stability and package-testing costs; separate immediate release evidence from ongoing real-time work. No automatic 12-month best-before assumption.

• **Sources, checked 1 Oct 2026:** shelf-life service, food service and phone, laboratories, email.

Discovery leads deliberately excluded from approved comparisons

Lemontails India's search-indexed official homepage describes white-label biscuits, but direct retrieval provided no readable contact information. Keep its homepage as a discovery route only. Do not invent a contact or count it as a verified domestic 500-pack source. Human-biscuit factories, pet-accessory OEMs and imported-chew traders were not treated as biscuit contract manufacturers merely to enlarge the list.

Packaging brief: send identical requirements to each bidder

Primary pack: one 200 g SKU, factory-filled opaque or appropriately metallized stand-up pouch, reclosure zipper plus intact top heat seal, tear notches if compatible, external front/back labels, legible batch/date coding. Pouch dimensions remain provisional until actual-fill tests. Request layer-by-layer laminate, total thickness/tolerances, food-contact declaration/migration evidence appropriate to intended use, oxygen and moisture barrier values with test conditions, seal temperature/dwell/pressure range, storage conditions, traceability and declared shelf life of empty packaging. The food technologist sets necessary OTR/WVTR performance; this directory does not invent universal numerical limits. A silver appearance, “food-grade” claim or thicker film alone is insufficient.

Labels: request two sizes based on approved pouch dieline, 500 labels of each design plus agreed waste/proof quantity, opaque legible print, adhesive that survives expected heat/humidity/handling on the actual pouch, no ink transfer, scuff-resistant finish. Leave seal and coding windows clear. Obtain artwork proof with dimensions and material code. Do not print health claims, certifications or recycling claims without evidence. Final regulatory label review precedes the full print order.

Outer packaging: price separate one-pack and three-pack customer-shipping boxes plus factory master cartons. Supply filled pouch dimensions and weights; ask vendor to recommend board/flute/strength against the courier route. Specify internal dimensions, cushioning, void space, closure tape and maximum stacking loads. Dimensional-weight charges matter as much as box unit cost. Master cartons within manufacturing landed cost must not be charged again as customer-order cartons.

Sample sequence: request approximately 10–20 empty pouches in each of two or three sizes, subject to vendor sample terms; fill at the factory with actual product; assess fit, seal clearance and 200 g net fill; apply physical label proofs; have factory/lab verify seal integrity and agreed barrier evidence; conduct realistic courier/drop/handling trials with filled boxes, documenting crumbs and pack failures. These commercial fit trials do not establish safety or shelf life. Only then buy the factory-agreed packaging quantity. If pouches sell only in lots of 100, a requirement of 550 means purchasing 600, not assuming a 550-piece order is available.

Ten-minute screening call: script and disqualifiers

Open: “We are evaluating Broski's first Indian domestic batch: one reward-biscuit SKU, 500 accepted 200 g packs, existing validated recipe, factory packing. This is an enquiry, not an order.”

1. Are you the manufacturer or trader? What legal entity, GST details, plant and bank beneficiary will appear on the contract? Do you supply domestic startup brands?

2. What is the minimum per recipe, pack size and artwork? Is 500 accepted finished packs possible? What exact output covers losses, retained samples and legal fill tolerances?

3. What existing recipe/pack combination has transferable stability evidence? Who signs formulation/use/feeding guidance? What changes would invalidate evidence?

4. Which process controls, ingredient/allergen records, batch COA and traceability documents can be supplied? Can our specialist review them under confidentiality?

5. Can you procure the approved stock pouch/labels and seal/code at the plant? Whose liability covers sealing and packaging defects?

6. What is included in the per-pack price, one-time fees, tax, inward freight and testing? Are we being quoted bulk kilograms or accepted units?

7. What samples, lead times, quote validity, deposit milestones and defect/replacement terms apply? Ask for dates, not “fast delivery.”

8. Can finished stock remain on hold pending acceptance? How are deviations, contamination complaints, withdrawals and recall costs handled?

Stop commercial progression for refusal to identify the factory/legal entity, unsupported shelf-life promises, unexplained bank-name mismatch, refusal of traceability or pressure to pay before specification/QA agreement. A high MOQ is a commercial mismatch, not proof of supplier misconduct.

Copyable RFQ templates — drafts, not sent

Manufacturer subject: Broski India pilot / 500 accepted × 200 g dog-biscuit packs

Please quote one existing documented reward-biscuit formulation for domestic India sale under Broski. We require 500 accepted sealed retail packs, with approved stock barrier pouch, two labels, filling, heat sealing, coding, master cartons and delivery to [PIN]. Please state legal selling entity/plant, product-specific MOQ, sample fee, exact gross production/retention allowance, ingredient/allergen documentation, stability evidence for the final pack, applicable testing/COA, artwork requirements and lead time after each approval. Itemize product, pack, labels, packing, coding, test/development charges, tax and freight; state recoverable/non-recoverable tax separately for our accountant. Include validity, payment milestones, unused packaging ownership, change-control and rejected-batch remedies. Planning target ₹75–95 per accepted landed pack is subject to compliant scope; quote your smallest viable alternative if unavailable. No production is authorized by this enquiry.

Packaging subject: Stock barrier-pouch samples and 500/600-piece quotation

Please propose two or three stock sizes for 200 g actual dog biscuits, with opaque barrier construction, heat seal and zipper. Provide dimensions, laminate/thickness, OTR/WVTR and test conditions, food-contact/migration documents, sealing settings, minimum/order increments and batch traceability. Quote samples plus 500 and 600 units with tax/freight to [factory PIN]. No custom cylinders. For labels, quote 500 per design in two sizes after dieline approval, physical proofs and agreed waste. Confirm lead time, material substitution control and defect replacement. Production awaits written proof/fit approval.

Carton subject: Plain stock courier boxes for 1-pack and 3-pack dog treats

Filled pouch is [L×W×H mm], [gross grams]. Quote protective stock boxes for one and three pouches, quantities 50/100, internal dimensions, flute/board/strength, cushioning, tape, sample charges and delivery to [PIN]. Include assembled external dimensions so our courier can estimate volumetric weight. Propose master-carton options separately; do not combine them with retail courier-box cost.

Laboratory subject: Existing-recipe pet-biscuit pilot — release and stability evidence

Please review [ingredient/process/formulation revision], [pack structure], intended dog use and storage/distribution conditions. Propose a scoped protocol for initial safety, label declarations, ingredient-dependent contaminants, moisture/water activity, oxidation where relevant, seal/pack suitability and shelf-life substantiation. Please identify accredited methods/matrix/location, test limits/reference basis, sample mass and number, chain of custody, courier requirements, test dates, reports, interpretation support and itemized tax-inclusive fees. State what existing manufacturer data can validly support and what requires new testing. Please distinguish batch-release checks from accelerated and real-time stability; do not assume our desired best-before is already justified.

Quote comparison and final selection

Keep one row per supplier: legal entity; direct/adjacent fit; MOQ; accepted quantity; net fill; product cost; primary-pack/label cost; factory packing; master carton; freight; tax treatment; one-time fees; evidence gaps; quote date/validity; deposit; dispatch date; payment beneficiary; remedies. Calculate landed recurring cost divided by **accepted retail packs**, not kilograms or all output including rejects. Only after mandatory safety/legal/traceability gates pass, score documented quality/evidence 35%, landed economics 25%, MOQ/cash exposure 20%, delivery 10%, support/remedy terms 10%. Low price cannot offset a failed gate.

Founder execution within 10 hours/week: week 1 collect three comparable manufacturing/packaging responses and one lab scope; week 2 shortlist two viable paths and commission approved samples; week 3 compare samples/evidence and resolve quote gaps. Production calendar begins only after formulation, pack, label, contract and QA gates pass. A 500-pack minimum with 50 packs reserved means at most 450 packs initially available for sale; expert-required samples/retains may change that allocation. Record council decision: keep one SKU and the contingency; change quantity/schedule before compromising evidence or making an unquoted commitment.

24 / Differentiation and market experiments

1 October 2026. Decision: validate one outsourced 200 g complementary reward-biscuit SKU in one reachable Indian city cluster. Hard total cash ceiling INR 200,000; acquisition ceiling INR 15,000; founder capacity 10 hours/week. This is a staged experiment, not a guaranteed high-growth business. Strategy skill applied: agency-business-strategist. No outreach or spending executed.

Evidence and strategic interpretation

HUFT's official store markets goat-milk/blueberry cookies at a displayed INR 299/200 g; Dogsee markets carrot cookies at INR 199/300 g, with no stock displayed during research. Their ingredient-led positioning means “natural biscuits for dogs” is already crowded. These observations do not establish either firm's market share, service weaknesses or profitability. Sources accessed 30 September–1 October 2026: HUFT product, Dogsee product. Store crawls can lag; recheck prices before using comparative advertising.

Inference: the practical opening for a tiny entrant is a tightly served local cohort, traceable batches, clear feeding/ingredient information and responsive replenishment. These are hypotheses and execution standards, not an exclusive moat. Established brands can copy them. Relationships, reliable operations and repeat-purchase evidence may create a small local advantage over time.

WhatsApp's official help describes a business catalog for product display; this supports a simple assisted-sale channel, not proof of demand or guaranteed native payments. Use catalog links and the tested storefront/payment provider; avoid API subscriptions at pilot scale. Obtain opt-in, honour stop requests, and never scrape or buy pet-owner numbers. WhatsApp catalog.

Local groomer/apartment-community referrals are proposed tests, not researched availability or endorsements. Get each host's permission. ASCI guidance treats free products and other material connections as requiring prominent influencer disclosure; pay for agreed content, not positive opinions. ASCI influencer FAQs. Marketplace expansion is deferred until current category approval, fees, settlement and return costs are quoted. No invented marketplace margin or national market-size claim is needed to validate 100 local orders.

Three concepts to test before choosing packaging

Concept	Customer job / promise to test	Evidence test	Main risk
A. Everyday reward ritual — selected	Adult-dog owner wants an easy, enjoyable treat after a walk, with readable ingredients and straightforward reorder	At least 8 of 20 interviews report a recurring treat occasion; at least 10 of 20 qualified sample households later pay the stated price	Taste preference alone does not produce repeat purchase
B. Pocket training rewards	Owner wants small, clean-handling pieces for repeated reinforcement	Demonstrate verified piece dimensions, breakability, calories and crumbling with supplier-approved product; interview 5 trainers/owners	Current biscuit recipe may be unsuitable; “training” requires physical/product fit
C. Local dog-parent gift	Buyer wants a presentable small gift for another dog owner	Show a digital gift-card sleeve concept to 10 buyers; seek 3 price-specific expressions of intent before any extras	Seasonal demand, extra packaging cost, poor replenishment

Use separate concept cards with identical product image, weight and price to reduce confounding. Expressions of intent are weaker than paid purchases. Select A initially; retain B/C as research alternatives, not extra stock keeping units. If interviews reject A, change the concept before manufacturing. No second flavour, therapeutic promise, subscription billing or gift-box inventory in the pilot.

Proposed positioning: “Broski: a little reward for your everyday dog-parent moments. One clear recipe, a traceable batch, and easy local reordering.” Only publish “one clear recipe” when ingredients and supplier controls exist. Final flavour, texture, suitable age/size and feeding quantities must follow validated formulation and professional review. Do not claim suitability for every dog or medical benefit.

Working customer persona and job

Research hypothesis: a 25–45-year-old dog owner in a serviceable urban neighbourhood, living with an adult companion dog, already buying packaged treats at least monthly, and willing to inspect ingredients before trying a new brand. Household income is not assumed; observe actual spending. Early recruitment favours reachable people beyond friends/family who can afford the stated offer without inducement.

Functional job: reward the dog conveniently without confusing pack information. Emotional job: feel confident about the choice and enjoy a shared routine. Social job: share a useful local recommendation without risking friends' trust. Anxieties: dog refusal, unsuitable ingredients, stale/broken product, confusing delivery fees, unknown seller. Triggers to investigate: running out, a trusted groomer recommendation, seeing a truthful demonstration. Likely channels to test: permitted apartment pet groups, local groomers, opt-in WhatsApp and Instagram content; channel preference is not yet established.

Twenty discovery questions

Ask about actual past behaviour before showing the product. Record anonymised notes; request consent for contact and any recording separately.

1. Tell me about the last treat you bought: brand, pack, price and shop.
2. When did you last give a treat, and what was happening?
3. How many days a week do you use treats?
4. How long did your last pack last?
5. Who chooses and who pays for the treats?
6. What alternatives do you use, including homemade food or no treat?
7. What caused you to try your current brand?
8. What made you stop buying a previous brand?
9. What does your dog regularly refuse?
10. What ingredients or textures do you avoid, and why?
11. Has a vet given feeding restrictions that affect your choices?
12. What pack information do you actually check before buying?
13. Tell me about the last late, damaged or stale delivery.
14. What would make you trust a new seller enough to try once?
15. Where do you usually discover pet products?
16. Have you acted on a groomer, creator or friend recommendation recently?

17. Would you prefer collecting locally or paying for delivery, and what did you choose last time?

18. Looking at INR 249 plus INR 59 delivery, INR 449 for two, and INR 649 for three, which would you choose today—or none—and why?

19. What would have to happen before you reordered this exact product?

20. May we invite you to an optional, clearly explained product evaluation after quality clearance, with no obligation to post or buy?

Do not recruit dogs with known restrictions into sampling without appropriate owner/veterinary clearance. Stop an evaluation on any reported adverse reaction and follow the quality escalation procedure; owner satisfaction cannot establish safety.

Offer and economic guardrails

Keep the preliminary offers unchanged: one 200 g pack INR 249 + INR 59 delivery; two identical packs INR 449 delivered; three identical packs INR 649 delivered, only on confirmed economical routes. Show actual total prices prominently. Bundles are quantity choices, not additional SKUs. No crossed-out fabricated price or artificial scarcity.

Under the existing finance assumptions—INR 85 landed per pack, provisional 18% output GST, freight INR 65/75/85, outer pack INR 18, gateway 2.36%, loss reserve INR 15—contribution before acquisition is INR 70.75/91.91/161.68. These are conditional calculations, not supplier quotes. At INR 60 acquisition cost, contribution becomes INR 10.75/31.91/101.68. Prioritise the three-pack for cold advertising; offer the single honestly for trial. Revised finance calculations supersede these if supplier or tax facts change.

Track customer acquisition cost as all attributable channel cash, commissions and consumed gifted-product cost divided by first-time delivered, non-refunded customers. Also track campaign media-only CAC separately. Existing scenarios use blended acquisition spend/all orders; never label that true new-customer CAC. Discounts reduce revenue and cannot disappear into an off-book marketing line. Do not assume lifetime value until repeat cohorts mature.

Illustrative cold funnel, not a forecast: INR 3,000 media at INR 10/click produces 300 visits. At 2% delivered first-order conversion, six customers imply INR 500 media CAC: uneconomic. With INR 60 target media CAC, INR 10 CPC would require 16.7% conversion. Therefore paid advertising is a small feasibility test, not the sales engine. Real attribution should use source codes plus an optional checkout source question, excluding cancelled/refunded orders.

Exact acquisition allocation: INR 15,000 maximum

Experiment / priority	Cash ceiling	Release and measurement
P1: 20 discovery interviews and local visits	1,000	Transport/phone only; no paid positive responses. Log repeated occasions and objections.
P2: Two permitted local sampling sessions / groomer demos	2,000	Host logistics and sample delivery; no booth commitment without quotation. Codes distinguish each host.
P3: Five small local creator tests	3,000	Up to INR 600 each including incremental delivery/content fee, if agreed; unused funds stay unspent. No posting obligation for an unsolicited gift, no positive-review requirement.
P4: Groomer referral pool	2,000	Up to 50 qualified first delivered customers × INR 40; no commission on refunded/self-referral orders. Disclose commercial relationship.
P5: Customer referral pool	1,000	Up to 25 INR 40 rewards after a different person's first delivered order; no review incentive, no stacking with groomer payout.
P6: Two sequential creative/offer ad tests	3,000	INR 1,500 each; QA, checkout and observed local economics must pass first.
P7: Conditional repeat of best proven channel	3,000	Released only after gate below; otherwise retain cash.
Total ceiling	15,000	No claim these budgets will purchase the intended outputs. Obtain agreement/quotes.

Stock for sampling is already inside the 500-pack purchase, not an extra purchase from this allocation. Proposed 50-pack reserve: 20 consenting consumer evaluations, 5 creator gifts, 5 partner evaluation packs, 10 QA/retained packs, 10 replacements. The quality professional decides actual retention quantity first; reduce marketing gifts if more retention is needed. Use sealed, approved packs; do not improvise unlabelled sample repacking. At INR 85/pack, all 50 cost INR 4,250 already counted in inventory; 30 outreach packs consume INR 2,550 of product value. Include consumed gifts in channel economics even though the cash was paid from inventory. Sample delivery/logistics must fit the specified marketing amounts, not silently expand freight budgets.

Creator selection: inspect local relevance, authentic audience comments and previous disclosures; follower count alone is insufficient. Brief requests an honest usage demonstration, actual pack/price, clear sponsored/gift disclosure and no medical or invented endorsement claims. Request permission before reusing content. Never label free-sample opinions verified purchases. Publish criticism fairly and handle safety complaints privately and promptly without suppressing reports.

Groomer model starts as referral-to-Broski, not wholesale: customer pays Broski, normal published offer applies, Broski fulfils, partner earns the capped referral fee. Do not also assume a retail margin. A later reseller route requires its own ex-tax margin, invoice, expiry/returns and credit model. No consignment stock or unpaid receivables in this pilot.

Weekly 90-day execution and evidence

Preparation and safety gates control dates. A delayed validated shelf life/manufacturer clearance moves launch; it does not compress testing.

Week	Founder outcome and gate
1	Choose reachable city/PIN cluster; complete 10 interviews; confirm actual founder hours.
2	Finish 20 interviews; compare three concept cards; send supplier requirements through supplier owner. Gate: recurring problem and price objections understood.
3	Obtain comparable RFQs, formulation/QA scope and target piece/pack requirements. Reject claims that lack evidence.
4	Decide one product and approved price hypothesis; confirm compliance/label and test plan. Draft FAQs from real interview objections.
5	Approve manufacture only after required evidence; finish pack artwork, real photos and transparent delivery/returns pages.
6	Test checkout/refund, stock and batch logs; quote actual one/two/three-pack routes; identify hosts/creators without assuming agreement.
7	Conditional receipt/QA clearance; segregate retained stock; run controlled dispatch checks. No public launch on failed QA.
8	First 10 consumer evaluations and first permitted session; collect consented observations; offer ordinary prices after evaluation.
9	Next 10 evaluations, second session and two creator pilots; review delivered-order contribution and service load.
10	Release up to first INR 1,500 ad test only if gates pass; launch capped partner/customer referral tracking.
11	Remaining creator/ad tests only if earlier evidence warrants; inspect attribution and margin, not likes.
12	Ask eligible earlier customers about replenishment without auto-enrolling; review complaints, repeat purchases and stock expiry risk.
13 / days 85–90	Close cash/tax/stock cohort report; decide stop, refine or fund a measured next batch. Unused caps remain cash.

Founder weekly 10 hours: interviews/channel execution 3h, supplier/QA2h, content approval1h, cash/metrics1h, customer exceptions1h, dispatch-helper coordination1h, buffer1h. Routine packing/support uses the existing INR 10,000 help allocation, not extra marketing headcount. Two short useful posts/week are sufficient initially: actual product/ingredient explanation, transparent pack opening, founder process, or a consented customer question. Timing is tested against audience response, not called universally optimal.

Stop, refine and scale rules

These are management thresholds for a small pilot, not statistically proven benchmarks.

• Immediate hold: unresolved product safety/seal/traceability issue, misleading claim, failed compliance/quality gate or insufficient fulfilment cash. Escalate complaints through the quality owner.

• Refine before ads if fewer than 8/20 interviews reveal a recurring relevant job; avoid manufacturing merely because friends like the logo.

• Review sample conversion after all 20 evaluated households have 14 days to decide: target at least 10 paid first orders at the normal offer. If fewer than 5 buy, pause new acquisition and investigate price/product fit; do not count gifts as sales.

• Review each INR 1,500 ad tranche after a full seven-day attribution window and delivery reconciliation. Stop if no plausible positive contribution after actual acquisition cost; never spend the second tranche automatically. A few orders are directional only.

• Release the INR 3,000 winning-channel reserve only after at least 20 attributable first-time delivered orders, observed total CAC at or below INR 60, positive contribution after actual losses, and no unresolved quality issues. If the winning channel cannot be measured, retain the reserve.

• Measure 30-day repeat rate only among customers whose first delivered order is at least 30 days old. Require at least 20 eligible customers before interpreting the pilot target of 20% repeat. If the selling window is too short, report immature data and extend observation without a reorder commitment.

• Reorder only against verified demand, stock/expiry reconciliation, confirmed next-batch cost and a cash forecast protecting taxes, refunds and INR 30,000 contingency. Scale a proven channel in small increments; 90-day revenue growth or full startup-cost recovery is not promised.

Council challenge questions

Finance: does INR 85 genuinely include tax, pouch, label and inbound? What happens at higher billable weight? Can INR 40 commission plus gifts preserve margin? Is CAC measured over new delivered customers? Is the 18% tax assumption confirmed? Supplier/QA: is one 500-pack run available; is the recipe appropriate to the claimed use; what evidence validates shelf life; how much retained stock is required? CEO: which city and founder network are real; why will strangers pay instead of buy established brands; which evidence would make us stop; can the team dispatch within 10 h founder capacity; will we protect contingency rather than chase sunk costs?

Recorded specialist challenge and decision

Finance challenged single-pack advertising and unbudgeted partner commissions. Accepted: lead cold acquisition with the three-pack, use a fixed INR 40 referral rather than an assumed 10% commission, prohibit referral double-payout, and include gifted-stock cost in channel CAC. The fixed reward costs more than 10% on a single pack but less on a three-pack; single referral contribution is only INR 30.75 before allocated gifts under current assumptions. Do not combine it with a further hidden discount.

Supplier challenged the INR 85 landed assumption and a fixed launch date. Accepted: INR 75–95/200 g is only an indicative planning range pending RFQs; agree **500 accepted finished sealed packs**, including how process loss and factory retention affect output, rather than buying an assumed 100 kg of bulk material. At INR 95 instead of INR 85, three-pack contribution drops by INR 30/order before acquisition. Use an existing recipe only with applicable validated packaging/shelf-life evidence, and postpone launch when evidence is incomplete. Expert retention requirements override discretionary gifting. Neither specialist has supplied an actual supplier quotation.

All proposed targets, persona details, funnel assumptions and channel budgets are hypotheses. Official sources establish product/channel features and disclosure guidance, not Broski demand. Reconcile this section with the finance and supplier council files before final PDF assembly.

25 / Detailed finance and operating system

Prepared 1 October 2026. India; city and legal entity not yet selected. This is a staged operating plan, not supplier approval, a sales forecast or permission to skip required professional checks. Financial-analyst workflow applied: assumptions, cash controls, scenario reconciliation and stress testing. Earlier manufacturing/compliance notes inform the gates below. No outreach, purchase, registration or payment has been performed.

1. Decisions to lock before committing money

Launch one outsourced existing dog-biscuit formulation, one 200 g retail pack and a 500-accepted-pack pilot. Obtain qualified review of the recipe, intended complementary use, final pouch and supported shelf life. The same SKU can be sold singly or in two/three-pack bundles. Do not finance a factory, second flavour, marketplace rollout or printed-film MOQ from this envelope.

₹85 per pack is an RFQ target, not a quotation. It includes ingredients/product, factory filling/sealing/coding, primary pouch, paired labels, master cartons, inbound freight and nonrecoverable supplier tax. Order 500 accepted sealed packs, not merely 100 kg bulk product. The manufacturer must state process loss, overfill, rejects and retained-sample treatment. Fifty packs are reserved within—not added to—the 500 purchase; 450 initially available for sale.

2. Exact ₹2,00,000 budget and cost ownership

Cash allocation	Cap ₹	Cost boundary
Discovery, development samples and sample courier	12,000	Before inventory; quote and log each sample
Qualified formulation review, laboratory/QA/stability scope	22,000	Independent scope/price unconfirmed
Accounting, classification, label/legal review	15,000	Includes applicable registration/search/filing fees within cap; seek quote
Artwork and real product photography	10,000	Existing generated art is not final product proof
Website, domain/hosting and payment implementation	8,000	Existing site reused; production quote required
Scoped pilot packing/support/admin help	10,000	Contracted scope, not full-time staff
500 accepted retail packs × ₹85	42,500	All landed primary packaging included
Outbound courier float	22,500	Customer/sample outbound deliveries; no separate free-delivery budget
Outer dispatch material	4,500	Shipping protection, not retail pouches
Payment fees	3,500	Variable fee reserve
Refund, damage and replacement loss allowance	5,000	Net unrecovered events; reconcile actuals
Acquisition experiments	15,000	Ads, referral/creator/partner cash costs share this cap
Protected contingency	30,000	Not a second SKU/reorder fund
Total	2,00,000	No hidden additional owner funding

₹77,000 setup/help + ₹42,500 stock + ₹35,500 variable fulfilment/payment/loss allowances + ₹15,000 acquisition + ₹30,000 contingency. No expense is implied just because cash has been reserved. If storage rent/deposit, equipment, insurance, mandatory registration, laboratory work or a safe commerce implementation cannot fit the relevant caps, obtain a revised costed plan and reduce scope/delay. No dedicated premises rent, founder salary, insurance premium or factory equipment is currently funded. Suitable existing storage is a dependency, not presumed universally lawful/free. Do not auto-consume contingency to disguise a structural budget shortfall.

3. Cash release schedule: commit only at a verified gate

Milestone	Maximum incremental release	Cumulative committed cap	Evidence
A: discovery/samples, weeks 1–3	12,000	12,000	City/storage choice; three comparable RFQs; sample plan; initial customer interviews
B: specialist and compliance review, weeks 2–4	37,000	49,000	Written QA/lab scope and local legal/tax/label requirements; all-in quotes fit
C: accepted manufacturing scope + creative + store, approximately weeks 4–6	60,500	1,09,500	Approved formula/pouch/artwork, supported stability, contract and viable economics
D: initial selling tranche after stock release	24,000	1,33,500	Help10,000; courier6,000; outer1,500; fees1,000; losses2,500; acquisition3,000
E: remaining pilot ceilings, only as justified	36,500	1,70,000	Courier16,500; outer3,000; fees2,500; losses2,500; acquisition12,000
Protected contingency retained	30,000	2,00,000 envelope	Separate available balance, no automatic spend

Milestones are commitment ceilings, not fixed payment dates. Proposed manufacturing split is 30% ₹12,750 after approvals and 70% ₹29,750 against agreed production/release evidence; negotiate it, do not describe it as supplier policy. A supplier requiring 100% changes exposure, not the ₹42,500 total. Never authorize production hoping later tests will validate unsupported shelf life. Allow 6–8 weeks only where existing recipe/final-pack evidence is adequate; otherwise extend.

Maintain a cash sheet: allocation, approved cap, committed, paid, remaining, invoice/reference, due date, accountable person. Available-to-commit cash equals bank balance minus unpaid commitments, tax/refund obligations and the ₹30,000 reserve. Gateway pending settlements and unsold stock are not cash. Payables cannot be ignored because their invoices arrive later.

4. Complete retail economics

Provisional scenario: registered seller, 18% output GST included in goods and delivery collections, no usable input credit. CA must confirm actual current classification, registration, invoice/discount/shipping treatment before commerce. This is not a settled tax conclusion. If input credits are available, recalculate using documented eligibility; do not spend anticipated credits.

Razorpay publishes a standard 2% platform fee plus GST; use 2.36% gross collection as the domestic planning assumption. Some methods differ (the pricing page lists 2.15% + GST for credit card on UPI). Promotional zero fees are not assumed. Confirm actual enabled methods/contract. Official Razorpay pricing accessed 1 October 2026.

Shipping depends on packed weight/dimensions, route and carrier. ₹65/75/85 below are gross assumptions, not quotes. Request actual lane results: local, within-state, metro, regional and remote, for each packed bundle. Two 200 g packs can exceed the 500 g slab with packing; three exceed it even before packing. Official Shiprocket calculator.

Per delivered prepaid order	1 pack	2 packs	3 packs
Merchandise, GST inclusive	249.00	449.00	649.00
Customer delivery charge	59.00	0	0
Gross collection	308.00	449.00	649.00
Provisional output GST component	46.98	68.49	99.00
Net collection	261.02	380.51	550.00
Landed inventory	85.00	170.00	255.00
Outbound courier	65.00	75.00	85.00
Outer shipping pack	18.00	18.00	18.00
Gateway, 2.36% gross	7.27	10.60	15.32
Expected net loss allowance	15.00	15.00	15.00
Before acquisition contribution	70.75	91.91	161.68
After ₹60 acquisition/order	10.75	31.91	101.68
After ₹80 acquisition/order	-9.25	11.91	81.68

Formula: gross/1.18 − 85×packs − courier − 18 − gross×0.0236 − 15 − acquisition. Do not subtract tax again from net collection. The ₹15 loss allowance represents expected net losses across orders; actual returned parcels can cost much more. Replace expected loss with actual refunds, unrecoverable stock and extra carriage without double-charging the same event. Free replacement stock comes from the reserved purchase; do not purchase/expense it again if already accounted in reserve consumption. Prepaid-first excludes COD charges and COD return-to-origin assumptions.

At order mix 20%/50%/30%, gross average collection ₹480.80, net ₹407.46, packs 2.1, stock ₹178.50, courier ₹76, outer ₹18, fee ₹11.35 and loss ₹15: pre-acquisition contribution ₹108.61. ₹60 blended acquisition leaves ₹48.61. This is a model, not measured CAC. Acquisition divided by all orders is blended cost; new-customer CAC has a separate denominator.

5. Discounts, referrals and wholesale bounds

Do not stack launch coupons on bundle prices. A 10% merchandise discount reduces contribution by approximately 10% × merchandise price × (1/1.18−0.0236): ₹20.51/₹36.99/₹53.47 for single/two/three packs, assuming unchanged freight. Any coupon requires recalculation and a bounded campaign allocation.

Referral option: maximum test commission 10% of merchandise actually collected, excluding delivery, cancellations and refunds, with a gross all-in commission cap confirmed in writing. Costs ₹24.90/₹44.90/₹64.90 leave ₹45.85/₹47.01/₹96.78 contribution before other acquisition/sales labour. Pay only after delivered-order verification and agreed reconciliation; all applicable partner taxes/fees must fit the cap or trigger recalculation. A referral cost replaces acquisition for a purely referred order; do not subtract it twice, nor ignore simultaneous ad costs if both genuinely occur. Commission/creator fees come from the ₹15,000 acquisition envelope.

Wholesale example, separate channel—not added to D2C scenario volumes: prepaid 20-pack order of the same SKU, no consignment/credit/automatic sale-or-return. Planning bulk freight ₹160/order=₹8/pack, shared carton

₹60=₹3/pack, expected net loss ₹5/pack, payment 2.36%invoice gross, inventory ₹85. These are unquoted allowances.

Discount off illustrative ₹249 retail price	Gross wholesale/pack	Net/pack	Contribution/pack before sales labour
20%	199.20	168.81	63.11
30%	174.30	147.71	42.60
40%	149.40	126.61	22.08

Formula g/1.18−85−8−3−5−0.0236g. For target ₹30 contribution, mathematical gross floor ₹159.01/pack; this corresponds to maximum36.14% discount under these assumptions. It is a calculation boundary, not an offered trade term. Begin negotiation near20–30%; verify retailer demand and actual freight. Existing three-pack delivered price is ₹216.33/pack, so a retailer cannot assume all buyers will pay ₹249 or achieve the stated headline margin. At30% trade discount, resale at ₹216.33 gives only about19.4% gross price spread before the retailer's own costs/tax accounting. Do not promise retailer ROI.

If landed cost rises15% and bulk freight adds ₹5/pack, wholesale30% contribution falls to ₹24.85; 40% falls to ₹4.33. If a partner needs credit, returns, listing fees, damaged-stock buyback or larger discounts, rebuild the channel economics and working-capital schedule before accepting. No blanket return exclusion overrides applicable obligations.

6. Stress tests and 90-day reconciliation

D2C shipping +₹20 cuts every offer contribution ₹20. Landed cost+15% reduces single/two/three contribution ₹12.75/₹25.50/₹38.25. Blended both changes take pre-acquisition ₹108.61 down to ₹61.84; at acquisition ₹80 the order loses ₹18.16. Single shipping ₹100 instead of ₹65 leaves only ₹35.75 pre-acquisition. Charge sufficient freight, restrict lanes, increase bundle price or stop; never cover structural negative contribution with contingency.

90 days from kickoff	Slow	Working	Strong
Delivered, prepaid, settled orders	40	100	200
Sold packs at2.1/order	84	210	420
Saleable stock left after50 reserve	366	240	30
Blended acquisition₹/order	120	80	55
Acquisition total	4,800	8,000	11,000
Gross collections	19,232	48,080	96,160
Contribution after acquisition	-456	2,861	10,722
Result after₹77,000 setup/ops and₹4,250 reserve-pack expense	-81,706	-78,389	-70,528
Cash after tax/loss ring-fencing	87,184	1,01,211	1,26,922

No reorder, credit, repeat-rate assumption or guaranteed volume. Conservative expense of all 50 reserve packs ₹4,250 is already inside the ₹42,500 purchase; accounting should expense only actual consumption/write-offs and retain usable stock appropriately. Sample goods cost must not also be inserted in acquisition expense. Sample carriage/creator fees remain separate actual costs within their caps, and must reduce cash/results when incurred: the scenario table includes only D2C order-level variable costs, so additional sampling distribution expense is not silently forecast as zero or claimed covered by its numerical results. Founder labour and income tax excluded. At an assumed ₹500/hour×130hours, unpaid economic labour is another ₹65,000.

Cash =200000−77000−42500 + gross/1.18 − orders×(76+18+11.34688+15+acquisition/order). Do not deduct sold inventory twice. Illustrations assume all collections settled, so operational cash forecasting must separately track gateway holds/delays. All startup scenarios lose money; validation success does not mean startup-cost recovery.

7. Step-by-step operating setup

1. Founder records city, storage address, selling entity choice, owner time, bank/accounting arrangement and selling geography. Obtain scoped local professional advice; do not blindly choose incorporation because the site looks corporate.

2. Adviser resolves manufacturer/seller activities, applicable registrations/permissions, Legal Metrology labels/packer roles, tax classification and invoicing, plastic packaging role and brand clearance. Use existing compliance research as questions, not completed clearance. Confirm actual government/professional fees within ₹15,000.

3. Create vendor register and collect legal name, plant address, registration details applicable to that entity, bank beneficiary, quote validity and supporting documents. Verify independently before a deposit.

4. Compare at least three comparable proposals or record why fewer fit. Separate mandatory pass/fail evidence from weighted commercial scoring; cheap unsafe/untraceable supply fails outright.

5. Approve recipe/specification, packaging fit, label proof, test scope and shelf-life evidence in the exact final pack. Specialists set methods, limits and retention quantity; founder does not invent them.

6. Sign purchase scope and only then issue the PO/deposit within milestoneC. Record accepted-pack quantity, tax/freight inclusions, delivery date, inspection/defect remedies, batch records and remaining-packaging ownership.

7. Prepare storage, lot ledger, complaint response, packing SOP and prepaid route quotes while production runs. Confirm contractor capacity/cost before promising dispatch times.

8. Receive and quarantine; count accepted/held/rejected packs, inspect seals/codes/weights per agreed sampling, match documents to lot and obtain release signoff. Allocate retained/sample/replacement stock visibly; only released stock reaches the site.

9. Convert demo checkout safely: actual approved SKU and truthful policies; provider onboarding, server-calculated amount, verified payment webhook, idempotent paid/refunded states, minimal secure fulfilment records and backups. Run sandbox and controlled real payment/refund/dispatch checks. The existing demo site is not already ready for this.

10. Launch limited serviceable prepaid pilot, record delivered-order economics weekly, and release ad tranches only when evidence supports them. Pause on safety, loss or cash triggers.

8. Reusable quote-comparison sheet

Use columns VendorA/B/C and evidence/date for each row: legal contracting entity; factory location; actual biscuit capability; domestic supply; recipe ID; exact pack/barrier;500accepted-pack MOQ; sample cost; product cost; primary pouch/label/coding; rejected/retained allowance; testing included/excluded; mastercartons; taxes; inward freight to actualPIN; total gross landed; per acceptedpack; deposit/balance; dates; quote expiry; recipe/pack stability; lotCOA; rights/changecontrol; defects/recall cooperation; open issues. Mark missing values UNKNOWN, not zero.

Normalize landed cost = all mandatory supply cash including nonrecoverable taxes and inbound freight / accepted retail packs. Do not compare ex-GST ex-freight proposals to all-in quotes. Score only after evidence passes: QA35%,

landedcost25%, recipe/pack fit15%, startup MOQ10%, reliability10%, terms5%. If no acceptable 500-pack bid, seek smaller compliant run, revise price or pause.

Contract questions: Who owns the formula versus brand/artwork? Can ingredients, source, process, plant or pouch change without written consent? Which testing and traceability records accompany every lot? Who bears defects, transit damage, recall investigation and replacement costs? What if lab release fails after payment? What happens to unused labels/pouches? Can the supplier sell domestic private-label stock? Which dates and remedies are agreed? What retention and insurance arrangements apply? Are quoted prices inclusive of every specified cost? Obtain qualified review; these are negotiation questions, not a completed legal agreement.

9. Dispatch, accounting and customer exceptions

Helper checklist per order: verify paid status from server/provider, serviceablePIN and stock; choose earliest-expiry released lot; scan/log lot and quantity; check seals and exact contents; protect against crushing; weigh/measure outer parcel; create label, invoice and pickup record; send actual tracking; reconcile pickup scan; follow delivery failures. Never dispatch from a browser success message alone.

Stock ledger fields: date,SKU,lot,manufacture/bestbefore,opening,received,released/held,sold,sampled,retained,replaced,damaged,returned,closing,location,orderreference. Reconcile opening+receipts−alloutflows to closing physical stock weekly. Returned damaged/opened packs stay quarantined, not resold. Retained samples are segregated and accessible under the expert's retention plan.

Accounting ledger separates gross sales, delivery collected, output tax, discounts/refunds, provider fees/tax, settlements pending/received, landed inventory, samples/writeoffs, freight and setup expenses. Match each provider settlement to gross payments minus documented refunds/fees/adjustments; investigate differences. Match courier invoices to actual slab/zone and dispute documented weight errors promptly. Maintain a rolling four-week cash due-date forecast. No forecast assumes promotional fee waivers or refundable tax credits as cash.

Customer issue triage: missing/delayed parcel→tracecarrier and give factual status; wrong/damaged pack→retain evidence, arrange fair resolution and loglot; payment duplicate/failure→verifyprovider and reconcile refund reference; suspected illness/contamination→advise prompt veterinary attention, stop affectedlot sales, preserve evidence and escalate tomanufacturer/qualifiedspecialist, tracebuyers and execute advised withdrawal/recall. Do not diagnose, promise safety from a photo, or trade a refund for silence. Retain only necessary customer data with controlled access and a defined retention policy.

10. Founder capacity and stop/reorder gates

Ten hours/week: supplierQA2; discovery/acquisition3; contentapproval1; cash/tax1; customerexceptions1; helpercoordination1; buffer1. Spread20 short interviews overweeks1–3; do not schedule20 thirty-minute interviews plus sourcing inweek1. Reuse at most3simpleposts/week from one shoot; specialist video production requires an explicit quote/time tradeoff. Outsourced helper handles packing/routine support within ₹10,000 scope, not an assumed unlimited service. Strong case implies29–40orders/week during5–7sellingweeks; quote that throughput. If founder must pack all orders, reduce marketing/volume and declare the tradeoff.

Stop release for missing safety/label evidence, quote outside budget, negative actual delivered contribution, excess billables, serious complaints, unavailable storage, or obligations consuming reserve. Reorder only after actual costs/stock/expiry/complaints are reconciled, genuine repeat evidence exists and projected cash covers taxes/refunds/payables plus ₹30,000 protected reserve. Another 500 packs costs ₹42,500 only if a new quote confirms it; not counted in this model.

11. Council record — actual peer review

The council skill is a known broken pointer and was not loaded. This is a practical discussion among sourcing, strategy/pricing and finance agents, not an invented board meeting or licensed review. Final council exchanges are recorded below when received.

Sourcing challenge received: ₹85 landed and ₹22,000 QA remain unquoted; quality/MOQ can force smaller pilot or delay, not an automatic reserve draw.500packs must be accepted sealed output, not100kg bulk. Retention quantity follows expert protocol; cheap clear-front pouch evidence is not barrier approval. Decision: accepted, reflected in milestones and RFQ. New supplier leads with unavailablepages/questionablelicence data remain unapproved; no financing assumption depends on them.

Finance challenge sent to strategy: single pack cannot carry ₹80 acquisition; lead bundles, count referral/creator/sample courier costs within existing caps, and shrink discretionary samples if lab retention requires more. Provisional50 reserve allocation20 consumer+5 creator+5 partner+10 retained+10 replacement is a planning partition only, conditional on QA retention requirements. Strategy counterpart agreed: lead three-pack and count all acquisition costs. Council selected a fixed ₹40 referral per first delivered new customer, capped at 50 groomer plus 25 customer referrals (₹3,000 maximum within the ₹15,000 acquisition allocation), with no duplicate/self/refunded-order payouts. This supersedes the percentage commission as the recommended test; the percentage calculation above remains a comparison only. A ₹40 referral leaves ₹30.75 / ₹51.91 / ₹121.68 for single / two / three packs before other acquisition allocations. No agreement represents proven demand or validated supplier economics.

Council accounting clarification: for channel comparisons, fully loaded new-customer acquisition cost includes attributable advertising, commissions, consumed gift stock and gift delivery. Cash acquisition cost excludes previously purchased inventory consumption. Reconcile both to the ledger; allocating the already-expensed ₹4,250 sample reserve to a channel must not subtract it a second time from total operating profit. If the ₹60 gate uses fully loaded CAC, apply that definition consistently. The scenario table uses cash acquisition assumptions and its separate sample expense, so its per-order contribution is not identical to the fully loaded channel metric. All source costs remain included exactly once.

Residual disagreements and unknowns: finance prefers preserving the ₹30,000 reserve even if quotations fail; sourcing agrees to delay/reduce scope. Strategy prefers fixed referral rewards to percentage commissions; finance accepts the ₹40 capped test but notes singles leave little headroom for gifts/media. No member can settle manufacturer price/MOQ, current tax applicability, demand, actual freight or laboratory scope without external evidence.

12. Price sensitivity required by final review

Two-pack offer only; fixed two-pack stock ₹170, courier ₹75, outer pack ₹18, expected loss ₹15. Fee stays 2.36% of gross price; provisional output GST remains 18%. No change in order volume is inferred from a price change.

Change to ₹449 offer	Gross price	Net of provisional tax	Gateway fee	Pre-acquisition contribution	After ₹60 acquisition
−20%	359.20	304.41	8.48	17.93	−42.07
−10%	404.10	342.46	9.54	54.92	−5.08
Base	449.00	380.51	10.60	91.91	31.91
+10%	493.90	418.56	11.66	128.90	68.90
+20%	538.80	456.61	12.72	165.89	105.89

Interpretation: a 10% price cut makes this offer negative at ₹60 acquisition under current costs. A higher price improves unit margin mathematically but may reduce conversion; willingness to pay remains to be tested. No elasticity or sales uplift is invented.

Stricter partner decision floor: require at least ₹35 contribution per wholesale pack before sales labour. Using the bulk assumptions above, gross wholesale floor = (85+8+3+5+35)/(1/1.18−0.0236) = ₹165.08 per pack. That limits discount from ₹249 to 33.70%, so the proposed 30% trade discount passes and 40% fails. This replaces the earlier

₹30 illustrative floor as the decision threshold. Always re-evaluate at actual courier/landed costs and written return terms.

For the two-pack D2C offer, ₹35 contribution before acquisition requires gross ₹379.93 or more (round upward from ₹379.9200); after ₹60 acquisition it requires at least ₹452.75 (formula result ₹452.7481). Therefore ₹449 leaves ₹31.91, short of a strict ₹35 after-acquisition goal. Do not claim all offers meet that stronger floor. The ₹35 wholesale-per-pack threshold and ₹35 retail-per-order threshold have different units and must never be substituted for each other.

Credit/consignment extension: model amount financed, collection days, financing/opportunity cost, bad-debt probability, unsold returns, reverse freight and damaged/expired stock explicitly. No such allowance is in the prepaid wholesale calculation; do not extend 30-day credit or sale-or-return at the same claimed contribution. Any allocated credit cost also needs cash headroom without borrowing from tax/refund reserves.

26 / Founder execution worksheets

1. Decide what Broski must mean

Working strategic hypothesis: Broski is an approachable reward brand for the everyday bond between a dog and their person. The defensible work is product consistency, honest information and reliable service; a slogan alone is easy to copy. Do not claim a novel biscuit formulation until it exists and is substantiated.

Start with one verified manufacturer recipe and one 200 g pack. Ask buyers which use occasion matters most: a small reward after a walk, training reinforcement, or an occasional indulgence. Choose the main occasion only after product size, texture, composition and qualified feeding guidance support it. Do not market a high-calorie biscuit as an unlimited training reward.

Three inexpensive creative hypotheses: a “Little Ritual” prompt card printed on the approved back label; a QR page showing the actual batch, ingredients, storage guidance and a real support contact; a weekly opt-in dog-parent story with explicit photo consent. These can add usefulness without buying a second SKU. Batch pages must not imply independent lab verification unless the actual report supports the statement.

Exclude untested health benefits, “vet approved” badges, fake popularity, artificial scarcity, invented reviews and undisclosed AI photos posing as fulfilled customer orders. A sample review is not a launch asset; real customer evidence is.

2. Founder decisions worksheet

Decision	Write your answer before spending
Operating city, state and dispatch PIN	Unknown at preparation; choose a single serviceable launch area.
Time and ownership	Founder 10 hours/week assumed; list named helper and professional responsibilities.
Business and brand identity	Seller entity, banking, clear name, exact manufacturer/marketer roles.
Product and occasion	Signed formula revision, texture/size, 200 g net fill, intended dog use and restrictions.
Cash boundary	₹2,00,000 total; ₹30,000 reserve protected; no assumed new funding.
Order channel	Real secure checkout plus local discovery; prepaid first.
Storage and fulfilment	Suitable premises, dry/pest-controlled conditions, dispatch owner and lot ledger.
Measured success	Safe delivered orders, positive actual contribution, genuine feedback and repeat evidence.

3. The first manufacturer call

Opening: “I am evaluating one dog-biscuit SKU for a domestic pilot. Can you make and pack 500 accepted 200 g finished packs using an existing documented formulation? This is an enquiry, not a purchase commitment.”

Do not lead with the full ₹2 lakh budget. Ask for the supplier's normal terms first, then explain a small pilot target if needed. Request a written itemized quote to the actual dispatch PIN. A phone answer alone does not establish landed cost, safety or delivery terms.

Record date, contact name and role, legal entity, factory address, recipe options, sample terms, MOQ, per-accepted-pack price, tax/freight exclusions, documentation and next response date. Follow up only through the

supplier's published business channels and retain the quotation. Do not send an advance to an unrelated individual.

Call result: proceed to samples; ask for missing documents; category mismatch; MOQ unaffordable; or decline. Keep a backup lead active until the primary sample/specification and written quote pass. An attractive brochure does not override failed quality evidence.

4. Packing choices that matter

Primary pouch protects the product; front/back label communicates the approved facts; shipping carton protects the parcel in transit. Keep these costs separate in quotes. The base ₹85 landed pack already includes primary pouch, labels, sealing/coding and inbound delivery assumptions. The ₹18 per order shipping material is additional.

Recommended provisional route: opaque or metallized stand-up zipper pouch, heat sealed above the zipper by the manufacturer, with professionally reviewed durable labels. Ask for OTR and WVTR, material structure, intended-contact suitability and seal parameters. “Food grade,” thickness, silver colour or a zipper alone do not prove shelf life.

Pack-fit test: fill the actual approved biscuit into two or three sample pouch sizes; verify usable headspace and seal area, whether biscuits crumble, label fit, print readability and the packed weight/dimensions. Give the final pouch specification to the qualified shelf-life reviewer. Do not extrapolate the tested shelf life from a different pouch.

For first run, skip clear windows, custom-shaped bags, print cylinders, rigid gift boxes and elaborate inserts unless supplier evidence and the same cash envelope justify them. A window needs its own barrier assessment; an expensive unboxing must earn back its cost. Laminated pouches may have recycling limitations, so no unsupported eco-friendly claims.

5. Compare quotes on accepted finished packs

Field	Quote A	Quote B	Quote C
Biscuit capability and domestic supply	Fill	Fill	Fill
500 accepted 200 g packs available?	Fill	Fill	Fill
Formula/specification and QA evidence	Fill	Fill	Fill
Product plus filling/sealing/coding	₹	₹	₹
Pouch plus front/back labels	₹	₹	₹
Outer master cartons and inbound freight	₹	₹	₹
Taxes and nonrecoverable charges	₹	₹	₹
Required separately paid review/testing	₹	₹	₹
Gross inventory invoice / accepted packs	₹ per pack	₹ per pack	₹ per pack
Deposit, milestones, reject replacement	Terms	Terms	Terms
Documented production/stability lead time	Days/weeks	Days/weeks	Days/weeks

Include paid lab/review expenses under their existing budget lines, not inside inventory twice. If a quote includes them, remove that duplicate from the setup allocation only after confirming the commissioned scope. Recoverable GST depends on eligibility; budget gross cash before assuming a credit.

6. Customer questions before the batch

Ask about the last actual treat purchase: brand, amount paid, weight, channel, delivery time and how long it lasted. Ask why it was chosen and what the dog accepted or rejected. Ask whether ingredients, texture, size or resealing affected use. Avoid collecting unnecessary sensitive details.

Show the proposed actual prices and delivery charges without claiming a product is ready. Ask “Which would you buy, and what makes you hesitate?” rather than “Do you like our idea?” Ask what proof an unfamiliar brand needs and how the buyer would discover it. Record objections verbatim with consent, then group repeated themes.

Interview 20 buyers across weeks 1–3; short sessions plus notes must fit the founder's weekly acquisition time. Interested friends are a convenience sample, not representative national demand. Take no paid orders before the product and commerce gates pass.

7. A useful launch dashboard

Metric	Definition / action
Delivered orders	Orders actually received; distinguish pending, canceled and returned.
Net sales	Actual collections less applicable tax, refunds and adjustments.
Contribution	Net sales minus stock, freight, packing, payment, losses and acquisition.
New-customer CAC	Attributed acquisition expenditure / new delivered customers; small samples are noisy.
Blended acquisition spend	All acquisition spend / all delivered orders; different from paid-channel CAC.
Repeat cohort	Buyers with enough elapsed time to reorder; report count and denominator.
Quality incidents	Count by lot/severity; serious safety issue stops affected sales immediately.
Cash protection	Paid + committed spend, tax/refund liabilities, stock and remaining reserve.

Use one weekly sheet, one order/lot ledger and one complaint log. Decisions should follow delivered-order economics. Views, followers and influencer reach are supporting signals, not profit.

8. Stop, repair or grow

No viable supplier or evidence within the cap: pause the pilot and seek a smaller documented run. Do not buy equipment to escape an inconvenient MOQ. A resale fallback needs written rights, compliant handling and new economics; it is not permission to relabel somebody else's packs.

Positive contribution but slow demand: improve the repeated customer objection, narrow the audience and retest within the remaining acquisition cap. Negative contribution: change price, freight/service area, landed cost or channel before adding advertising. Quality uncertainty: stop release and resolve it with competent specialists.

Reorder only with actual delivered margins, resolved complaints, expiry/stock reconciliation, repeat-buy evidence and sufficient cash for the full next batch plus taxes/refunds while preserving the reserve. The pilot has no funded second production run in its revenue scenarios.

9. The brand's evidence ladder

Stage one: concept art and truthful waitlist. Stage two: actual approved samples, packaging proof and supplier/quality checks. Stage three: released stock and verified checkout. Stage four: real delivered feedback with permission. Stage five: measured repeat purchase and controlled expansion.

Match marketing to the stage actually achieved. Photos of generated packs may illustrate the concept; actual stock photos establish what the buyer will receive. Do not substitute professional-looking presentation for evidence.

27 / Integrated council decision

Peer challenges were exchanged before the agents reached their usage limit. The saved strategy and finance notes record accepted changes: lead cold acquisition with the three-pack; use a fixed ₹40 capped referral reward; prohibit double-payout; keep one SKU; count gift-stock consumption in channel economics without expensing it twice in total profit; and delay release when supplier or quality evidence is missing. The council skill itself is a broken local pointer and was not loaded.

• Funded plan: 500 accepted 200 g packs, provisional ₹85 landed, 450 initially saleable; 50 retained/evaluation/replacement stock subject to specialist requirements. Exact cash cap ₹2,00,000 and ₹30,000 protected reserve.

• Recommended first channel: West Delhi direct prepaid orders and permitted referral relationships. Wholesale terms remain an illustrative alternative, not a parallel funded rollout.

• Biscuit sourcing: B&K; direct capability lead; Mannu-G conditional backup. Adjacent meat/dehydrated-treat suppliers require a revised product decision and economics.

• Referral: ₹40 for a first delivered new customer, maximum 50 groomer and 25 customer rewards across funded pools. No stacking, self-referrals or payment for refunded orders.

• CAC gate: track fully loaded channel CAC including allocated consumed gift stock; report cash CAC separately. Pilot scenarios use cash acquisition and separately expense sample stock. Do not subtract samples twice.

• Wholesale decision floor: at least ₹35 contribution per pack under the stated prepaid bulk assumptions; the earlier ₹30 floor in the worksheet is illustrative only. Two-pack ₹449 delivers ₹31.91 after ₹60 acquisition in the model, below a strict ₹35 retail-order goal.

• Schedule: customer interviews over weeks 1–3, not all in week 1; two repurposed content posts/week. Lab/QA and legal gates override launch dates.

• Supplier numbers are publicly published, not call-verified. Availability, scope, dates, payment beneficiaries and prices must be checked before any commitment.

Direct integration review checked saved notes and reconciled these decisions. A second complete independent review of the expanded final artifact was unavailable after the agent usage limit. No outreach, supplier order, deposit, paid campaign or public deployment occurred.

For the final supplier selection, use the directory score only after safety/legal gates: evidence 35%, economics 25%, MOQ/cash exposure 20%, delivery 10%, support/remedies 10%. Earlier scoring examples are optional comparison worksheets, not an additional conflicting approval rule. West Delhi supersedes any earlier unknown-city wording; exact dispatch PIN, suitable storage and entity remain undecided.

28 / One more label quotation

HelloPrints, Hyderabad — public business phone +91 92562 56699; email hello@helloprint.in. Published address: Plot No. 42, HMT Shatavahana Nagar, near Miyapur Metro Station, Miyapur, Hyderabad, Telangana 500049. This is a national shipping comparison, not a West Delhi shop. Use the official contact-page WhatsApp link if desired; no outreach has been made.

Its official product page lists a 100-label minimum and paper/vinyl/PP options. Request the actual 500-per-design front/back label quote, physical proof, adhesive compatibility, finish, tax/freight, print readiness and defect replacement. A label minimum is not a manufacturer MOQ. This is the twelfth directory lead; the eleven-lead count refers to the specialist directory alone.

Official contact page · Official product and MOQ page. Checked 1 October 2026. These published details are not call-verified. Earlier indexed-only caution is superseded by the accessible official product result for these points; exact Broski pricing remains unquoted.

19 / Market price context

Accessed 30 September–1 October 2026. Formula and positioning differ; these are retail price context, not proof of equivalent quality, demand or wholesale margins.

Product	Pack / displayed price	Price per 100 g / caveat
HUFT Goat Milk Cookies — Blueberry [S15]	200 g / ₹299	₹149.50; shipping extra as applicable.
Dogsee Gigabites Carrot Cookies [S16]	300 g / ₹199	₹66.33; no stock displayed during review.
Mother of Strays All New Dog Biscuits [S17]	Entry 400 g option / ₹299	₹74.75 indicative; sold out. Recheck selected variant.
Broski single-pack hypothesis	200 g / ₹249 + ₹59 freight	₹124.50 product-only; ₹308 collected including delivery.
Broski bundle hypotheses	400 g / ₹449; 600 g / ₹649	₹112.25 / ₹108.17 per 100 g, delivered on approved lanes.

Test the complete delivered price

The earlier website concept of ₹349/200 g is about 17% above the HUFT benchmark. This plan tests ₹249 singles and bundles instead; neither price is validated customer willingness to pay. Update the website and approved printed MRP only after quotes, tax review and customer evidence align.

Compete through clear product information, consistent quality, useful pack size and responsive service. Do not infer competitor product faults from price or claim Broski is healthier without substantiation. Log actual objections from the 20 interviews and address the recurring ones.

Decision gate: No competitor stock, price or promotion is guaranteed. Recheck at the pricing decision; compare delivered prices and fees on the same basis.

20 / Sources and verification

Sources were reviewed for the specific points noted; supplier marketing claims are not independent validation. Exact tax and local permit applicability remain professional confirmation items. Live prices, availability and terms can change.
